

Registering Your Clicker

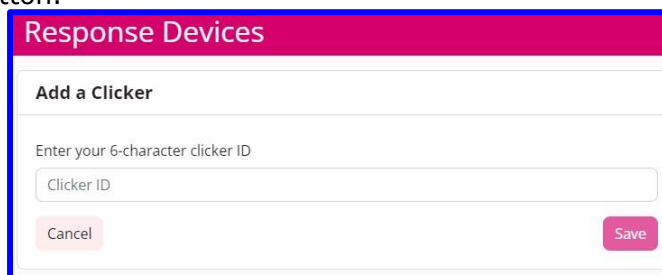

To have your responses recognized as coming from you, you need to register your clicker device ID in your PointSolutions account.

To register your clicker device ID:

1. Login into Sakai and click the **PointSolutions** tool on the left navigation to launch PointSolutions.
2. Click the **Avatar** icon  to the top right of the PointSolutions window.
3. Select **Profile** from the menu.
4. Click the **Add a Clicker** button under Response Devices

5. Enter the **6-character clicker ID** found at the back of your clicker device.
6. Click the **Save** button.

Your clicker device ID is now associated with your account.

NOTE: To remove a lost or non-functioning clicker device from your account, return to the Profile page and click the **X** to the top right of the clicker tile to remove the device from your account. Make sure to add the new device ID to your account using the steps above.

Setting the Channel on Your RF LCD Clicker

While in an active PointSolutions session, where a receiver is present, set the channel on your clicker, so that the receiver can receive responses from the clicker.

To set the channel for the clicker:

1. Press the Channel button.
2. Enter the two-digit channel number that is being used for your class, i.e. 74.
3. Press the Channel button again.

NOTE: A green flash indicates the channel was successfully changed.

Understanding the LCD Screen

- When transmitting a response, the  appears.
- Verify your channel number (e.g. 41 in this image).
Remember for your classes channel 74 is used at all times!
- View the battery life (to the top right of the screen).
- Verify your response on the screen (for example: 5/E on the display screen)

Understanding Response/Flash indicators

- A green flash indicates that the response was received.
- Two red flashes indicate that the answer choice was invalid, i.e. it was not an answer choice presented for that question.
- A single yellow flash indicates that polling is closed.
- Multiple yellow flashes indicate that the response is sending. Wait for the green flash to denote success.
- Multiple yellow flashes followed by a red flash indicate that the response was not received.

NOTE: If you do not see a green flash, try again!

Getting Support

Visit a TA in any of the following print labs to get support with your clicker:

- Pensick
- Taylor
- Charter

Regular IT Support Channels: <https://support.sgu.edu> or support@sgu.edu.
