

Basic Principles of Medicine 1

Module: Foundation to Medicine | Self-Directed Learning

Pre-small group required reading for FTM SG 10 anatomy content

Department of Anatomical Sciences

School of Medicine, St. George's University

Copyright

All year-1 course materials, whether in print or online, are protected by copyright. The work, or parts of it, may not be copied, distributed, or published in any form, printed, electronic, or otherwise.

As an exception, students enrolled in year 1 of St. George's University School of Medicine and their faculty are permitted to make electronic or print copies of all downloadable files for personal and classroom use only, provided that no alterations to the documents are made and that the copyright statement is maintained in all copies.

'View only' files, such as lecture recordings, are explicitly excluded from download, and creating copies of these recordings by students and other users is strictly illegal.

The author of this document has made the best effort to observe current copyright law and the copyright policy of St. George's University. Users of this document identifying potential violations of these regulations are asked to bring their concerns to the attention of the author.

Objectives

- This activity is designed for self-directed learning. Students are encouraged to utilize available academic resources, such as the library and ClinicalKey, to find answers to the listed objectives. To support your efforts, we have included a few helpful links and provided some slides that may assist you in your learning.

SOM.MKII.BPM1.1.FTM.1.ANAT.1123	Describe the Anatomical Position
SOM.MKII.BPM1.1.FTM.1.ANAT.1124	Define the anatomical terms of position
SOM.MKII.BPM1.1.FTM.1.ANAT.1125	Define the planes used for sectional anatomy
SOM.MKII.BPM1.1.FTM.1.ANAT.1126	Define the planes used as landmarks for surface anatomy
SOM.MKII.BPM1.1.FTM.1.ANAT.1127	Describe how planes and landmarks are used to describe the surface anatomy of organ
SOM.MKII.BPM1.1.FTM.1.ANAT.1129	Describe the formation of medical terms
SOM.MKII.BPM1.1.FTM.1.ANAT.1130	Define the concepts: word root, prefix, suffix, combining forms
SOM.MKII.BPM1.1.FTM.1.ANAT.1131	Describe the meanings of commonly used prefixes, suffixes, word roots

ANATOMICAL POSITION

The baseline for anatomical descriptions

- **Body erect**
- **Arms at sides**
- **Feet together**
- **Palms facing forward**

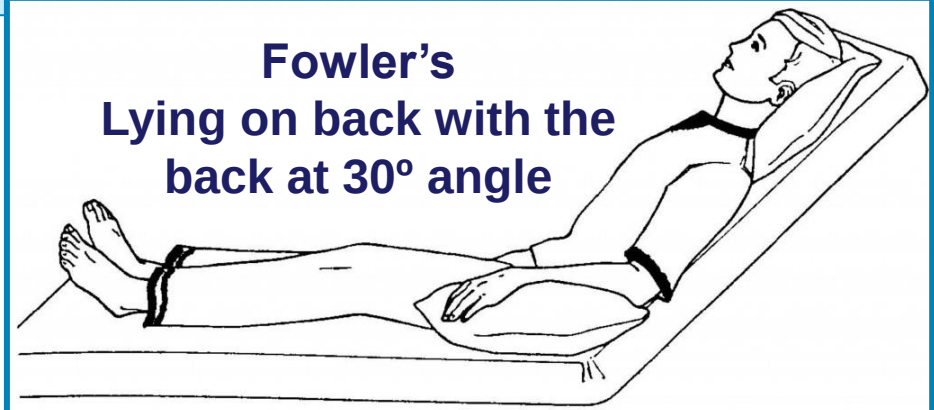

Regardless of the actual position the organs and parts are always described according to this position

In this position , the body is erect, the eyes look straight to the front, the upper limbs hang by the side of the trunk with the palms directed forwards, and the lower limbs are parallel with the toes pointing forwards.

Other body positions

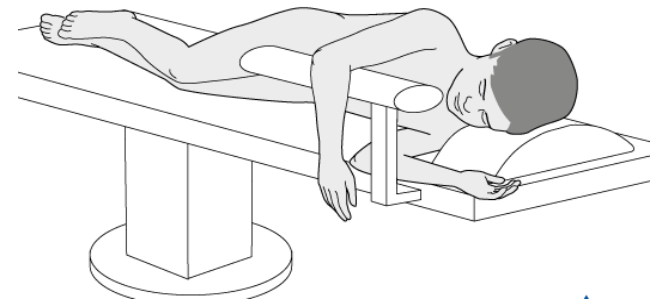

Supine
Lying on back (recumbent)

Fowler's
Lying on back with the
back at 30° angle

Prone
Lying down (on abdomen)

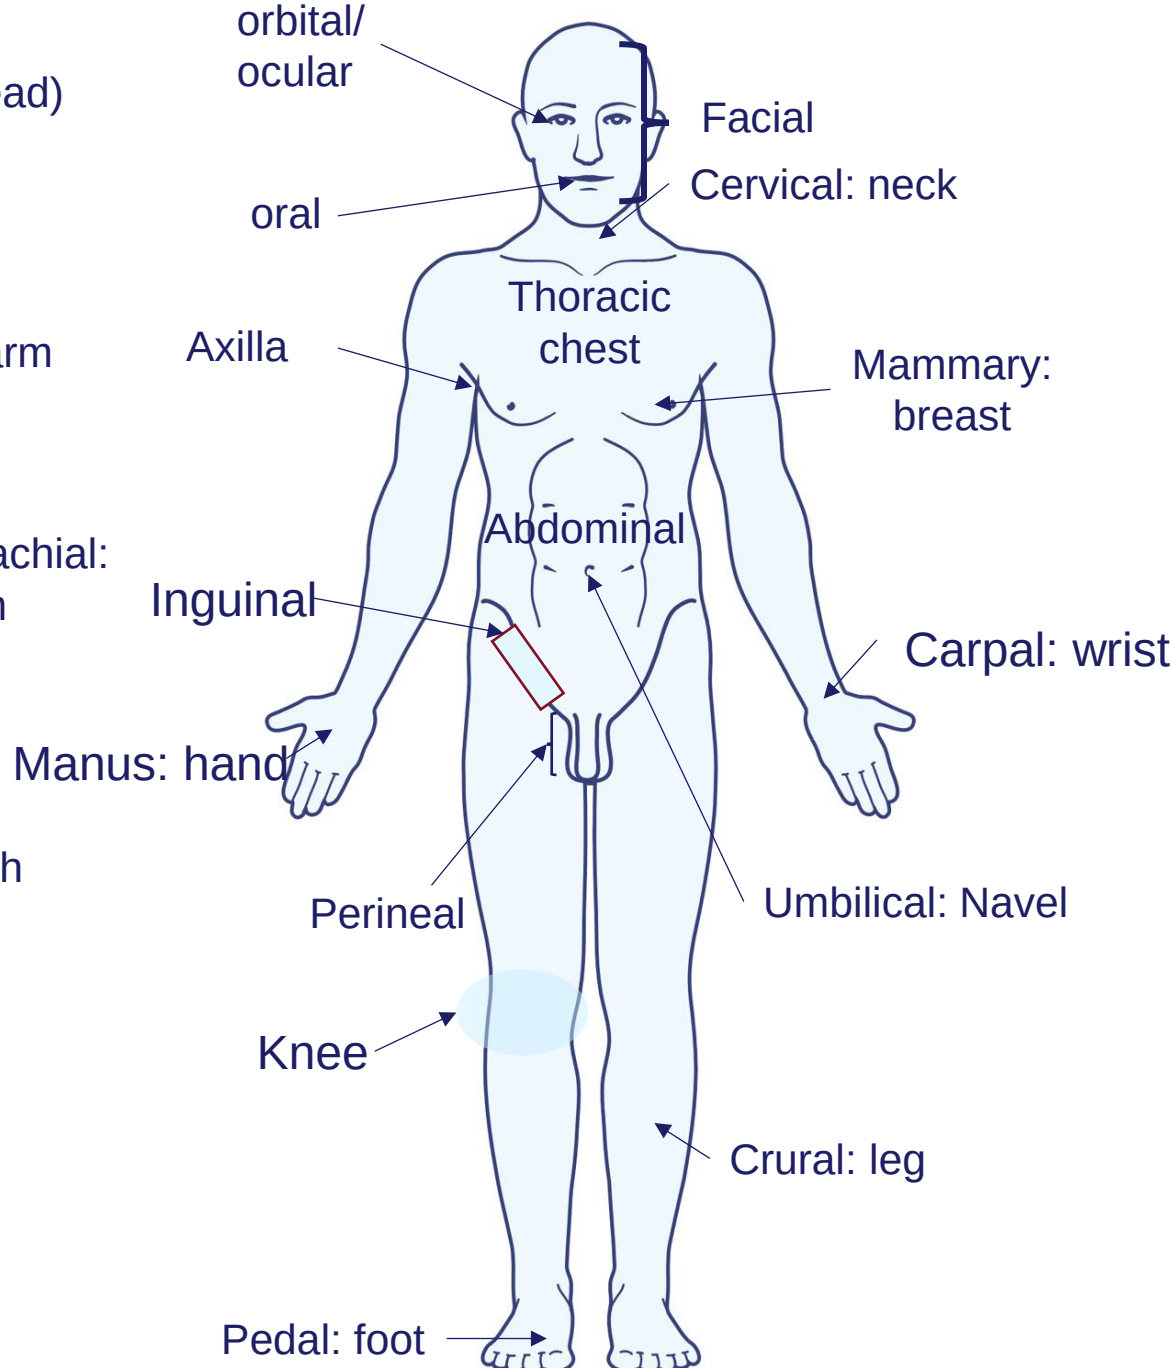

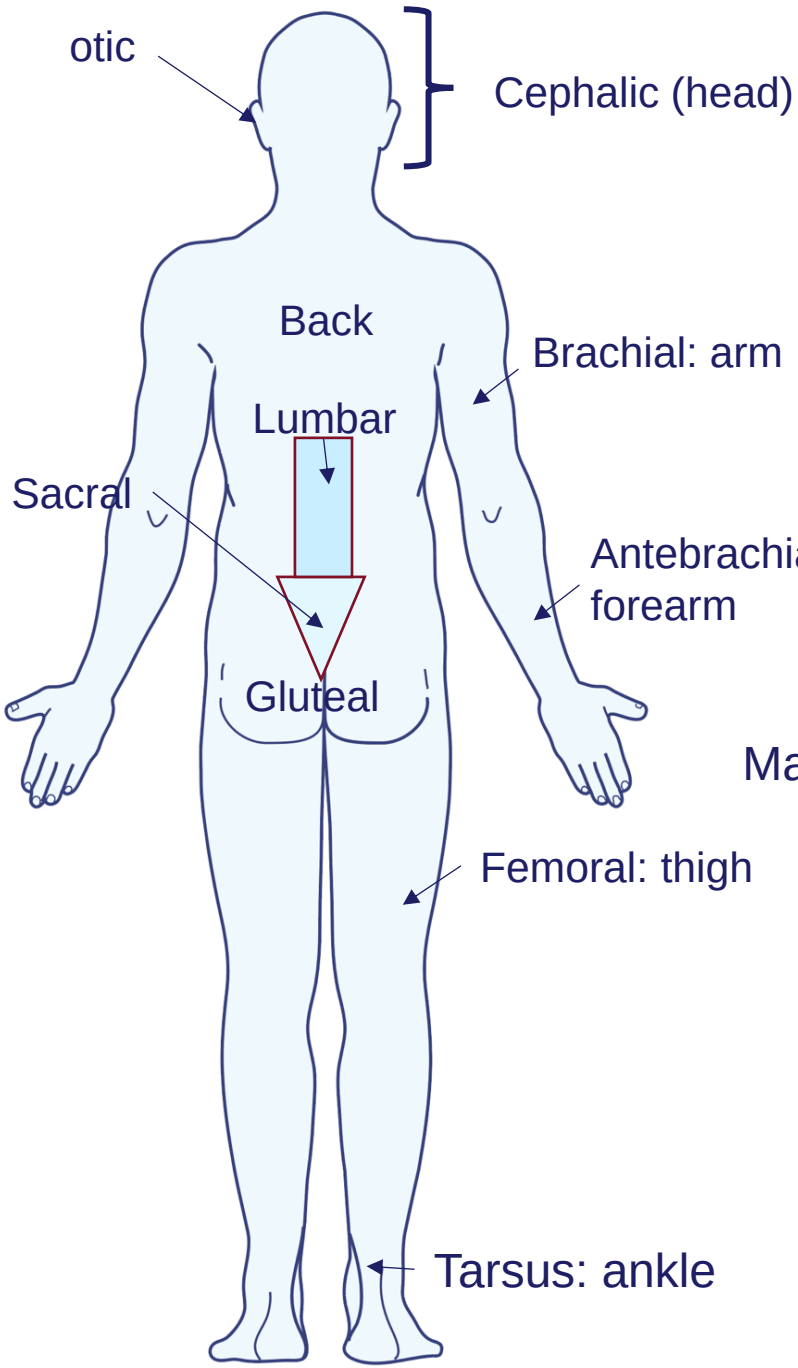

Left decubitus
Lying on left side

Lithotomy position
Hips and knees fully
flexed ,thighs
separated.

**Standard position for
physical examination,
the physician is to the right
of the patient**

Anatomical terms of Position

Directional Terms

- Anterior
 - Towards the front
- Posterior
 - Towards the back
- Superior
 - Towards the head
- Inferior
 - Towards the feet
- Medial
 - Towards the midline
- Lateral
 - Away from the midline
- Ipsilateral
 - On the same sides
- Contralateral
 - On opposite sides

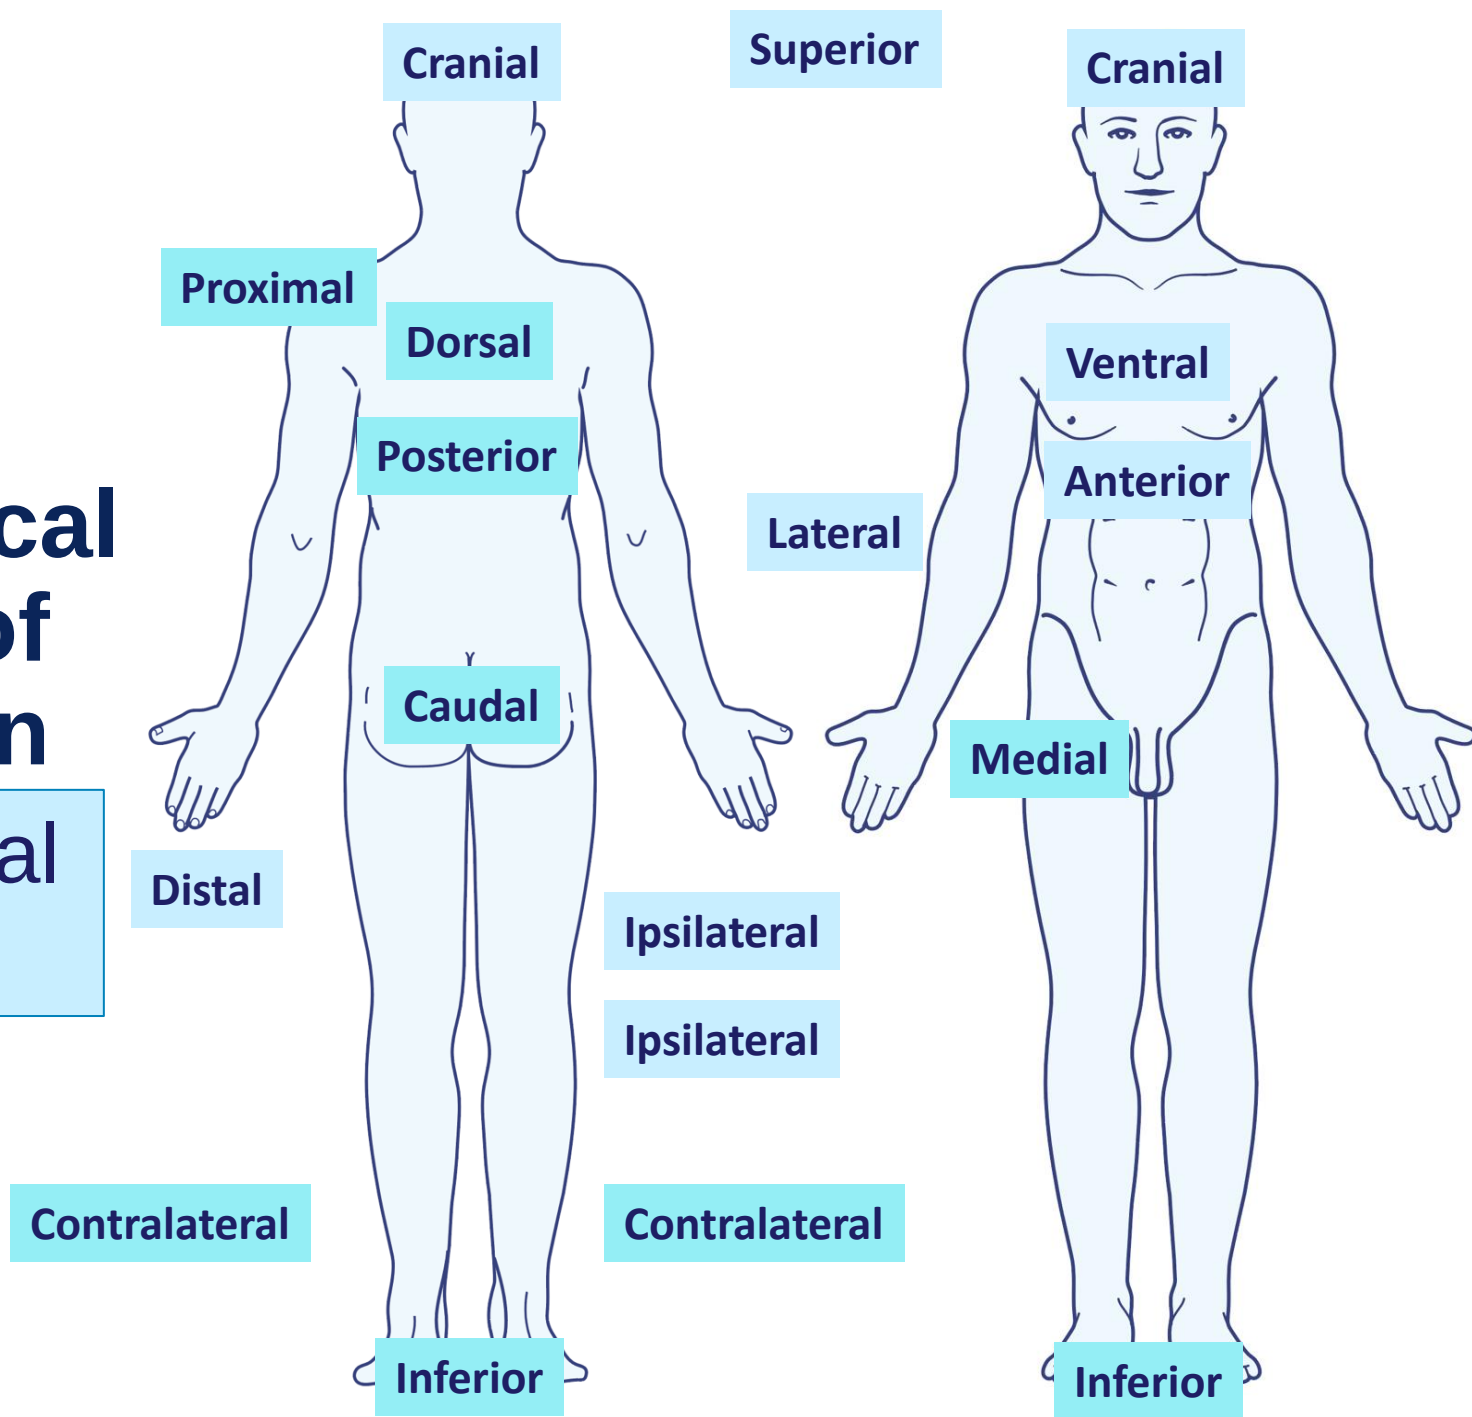

- Ventral
 - Towards the belly
- Dorsal
 - Towards the back
- Cranial or Rostral
 - Towards the head
- Caudal
 - Towards the tail

Mostly used in
embryology &
neuroanatomy

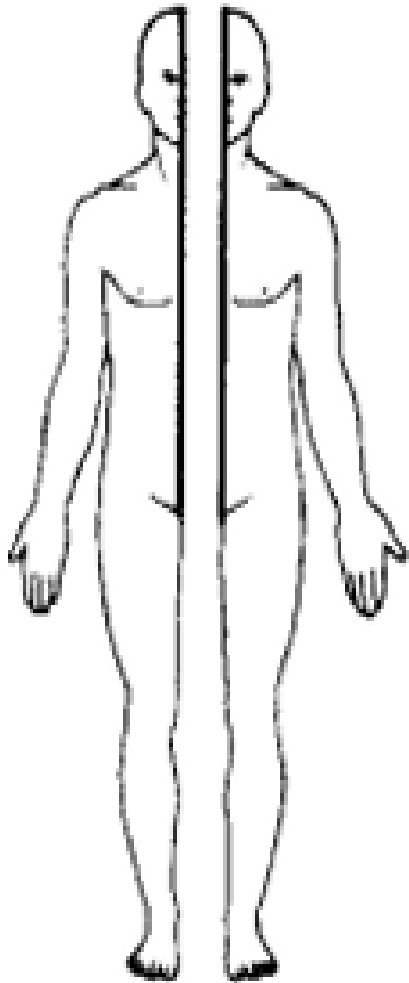

- Proximal
 - Nearer to the trunk
- Distal
 - Away from the trunk
- Superficial
 - Closer to the skin
- Deep
 - Closer to the inside of the body

Anatomical terms of Position

Directional Terms

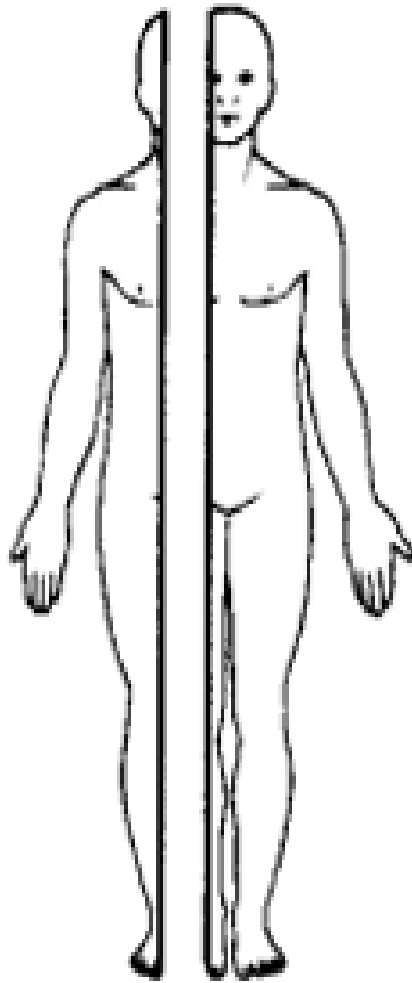

Planes of the body

median sagittal

Divides into left and right

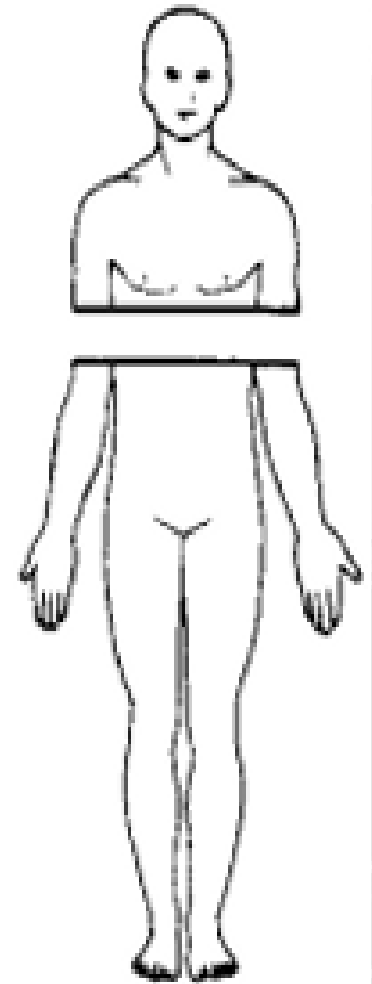

(para)sagittal

coronal

Divides into
anterior and
posterior

**Transverse/
horizontal/axial/
cross section**

Planes of the body
