

Lab Etiquette

1. Preparation

- Review the lab manual (checklist) and the objectives of the session.
- Dress appropriately, full scrubs and closed-toe shoes.
- Tie back long hair and avoid wearing dangling jewelry. (**NO** caps, bonnets or hoodies)
- Be on time

2. Entering the Lab

- Ensure that you have all necessary materials: lab manual, notebook, pen & electronic devices.
- Leave personal belongings in the designated area.

3. Handling Prosections

- Wear examination gloves (**NOT** provide)
- Handle prosections with care and respect, remembering they are invaluable teaching tools and should be preserved.
- Be gentle; use your hands to move muscles and use the wooden applicators to point to vessels and nerves.
- Do not attempt to dissect or alter the prosection.

4. Studying Prosections

- Use the lab manual, anatomical atlas, or other references to guide your study.
- Take time to identify and understand each structure.
- Discuss with your peers and ask faculty for clarification if needed.
- Sketch or take notes to aid your learning process, but do **NOT** take photographs.
- Each lab will have clicker questions at the end of each session. You must bring a designated electronic device with you to the lab, to ensure participation.

5. Cleaning Up

- Clean your work area, ensuring it's ready for the next student.
- Dispose of gloves and other disposable equipment in the designated biohazard containers.

6. Leaving the Lab

- Wash your hands thoroughly.
