

Name		Adequate image obtained		Structures identified	
Observer		Yes	No	Yes	No
Abdominal wall	Identify the superficial fascia, transversalis fascia, abdominis muscles and layers of the rectus sheath in the transverse plane				
	Identify the external and internal abdominal oblique muscles, transversus abdominis muscles, and parietal peritoneum in the transverse plane				
<i>Clinical Application: neurovascular plane for performing a transversus abdominis block (TABP)</i>					
Epigastrium	Identify the abdominal aorta, inferior vena cava, superior mesenteric artery, superior mesenteric vein, splenic vein, pancreas, left renal vein, left lobe of the liver in the transverse plane				
	Identify the abdominal aorta, inferior vena cava, superior mesenteric artery, superior mesenteric vein, splenic vein, pancreas, left renal vein, left lobe of the liver in the longitudinal plane				
	Identify the inferior vena cava, portal vein, common hepatic artery, celiac artery, splenic artery, abdominal aorta and lumbar vertebra in the transverse plane				
Hypogastrium	Identify right and left common iliac arteries, lumbar vertebra, psoas major muscles, and inferior vena cava in the transverse plane				
Right subcostal	Identify the portal vein, bile duct, and proper hepatic artery (i.e. "Mickey Mouse sign") as well as the aorta, inferior vena cava and lumbar vertebra in the transverse oblique plane				
	Identify the inferior vena cava, portal vein, hepatic vein, as well as the right ventricle and right atrium in the longitudinal plane				
Right intercostal	Identify the gallbladder and liver in the longitudinal oblique plane				
<i>Clinical Application: ultrasound-guided liver biopsy</i>					
Right hemithorax	Identify the right kidney, liver, right lung, diaphragm and hepatorenal recess (Morison's pouch) in the longitudinal plane				
Left hemithorax	Identify the left kidney, spleen, splenic capsule, splenic artery, splenorenal recess, left lung and diaphragm in the longitudinal plane				
<i>Clinical Application: ultrasonographic features of urolithiasis</i>
