

Ultrasound session: Abdomen

Preparation

Text: Essential Ultrasound Anatomy, [Chapter 8](#)

Associated videos, to be viewed before the session: [Ultrasound of the abdomen](#)

Note: Due to the possible presence of gas that obstructs ultrasonographic views, two sessions are provided to ensure sufficient anatomical structures are seen in all cohorts.

At the end of the session, you will be able to:

SOM.MKII.BPM2.1.DM.1.ANAT.0254	Select the most appropriate probe for ultrasound imaging of the abdomen
SOM.MKII.BPM2.1.DM.1.ANAT.0255	Demonstrate and explain appropriate patient positioning and probe location, alignment and marker orientation for obtaining a transverse view of the abdominal wall
SOM.MKII.BPM2.1.DM.1.ANAT.0257	Differentiate superficial fascia, transversalis fascia, as well as external oblique, internal oblique, and transverse abdominis muscles in the transverse plane over the abdominal wall
SOM.MKII.BPM2.1.DM.1.ANAT.0258	Demonstrate and explain appropriate patient positioning and probe location, alignment and marker orientation for obtaining transverse and longitudinal views of the hypogastrium and epigastrium
SOM.MKII.BPM2.1.DM.1.ANAT.0260	Differentiate the abdominal aorta, inferior vena cava, superior mesenteric artery and vein, splenic artery and vein, pancreas, portal vein, common hepatic artery, and celiac artery in the epigastrium
SOM.MKII.BPM2.1.DM.1.ANAT.0262	Differentiate right and left common iliac arteries, lumbar vertebrae, psoas major muscles, and inferior vena cava in a transverse view of the hypogastrium
SOM.MKII.BPM2.1.DM.1.ANAT.0263	Differentiate portal vein, bile duct, and proper hepatic artery in the transverse oblique plane over the right subcostal region
SOM.MKII.BPM2.1.DM.1.ANAT.0264	Differentiate gallbladder and liver in the longitudinal oblique plane over the right intercostal region
SOM.MKII.BPM2.1.DM.1.ANAT.0265	Demonstrate and explain appropriate patient positioning and probe location, alignment and marker orientation for obtaining longitudinal views of the right and left hemithorax
SOM.MKII.BPM2.1.DM.1.ANAT.0266	Differentiate the right lung, diaphragm and hepatorenal recess in the longitudinal plane in the right hemithorax
SOM.MKII.BPM2.1.DM.1.ANAT.0267	Differentiate the splenorenal recess, left lung, and diaphragm in the longitudinal plane in the left hemithorax
