

ER SG5: Female Reproductive System

Learning Objectives:

- Identify and describe the cells, tissues, organs and associated structures of the Female reproductive system.
- Present and demonstrate the cells, tissues, organs and associated structures of the Female reproductive system to the group.
- Apply the histology of the Female reproductive system to clinical cases and correlations.
- Mastering of professional skills and presentation skills.

Dress Code: Professional, casual attire or full scrubs with closed toed shoes.

Required materials and equipment:

1. ***Pawlina text Chapter 23:*** Female Reproductive System
 - a. Special attention should be paid to clinical folders (blue boxes)
2. HCB Lab Supplement Female Reproductive System.pdf (SG5 folder)
3. Clinical cases for Female reproductive system

How to prepare for this session:

1. Research article: ~10 minutes
2. Integrated cases discussion: ~ 85 – 90 minutes
 - Complete reading assignments: Pawlina text (Chapter 23)
 - Review the related ER lectures
 - Review the slides found in the Female Reproductive System.pdf along with the corresponding HCB Lab Supplement Female Reproductive System.pdf.
 - Practice presenting all slides as if you were presenting to the rest of the small group.
 - Facilitator and small group evaluations: ~5 mins

Note: Integrated small groups are student-driven, active-learning sessions.

Students should be prepared to present and discuss the slides found in the Female reproductive system.pdf. Students are randomly selected to present slides to the other members of the small group.
