Copyright

All year-1 course materials, whether in print or online, are protected by copyright. The work, or parts of it, may not be copied, distributed, or published in any form, printed, electronic, or otherwise.

As an exception, students enrolled in year 1 of St. George's University School of Medicine and their faculty are permitted to make electronic or print copies of all downloadable files for personal and classroom use only, provided that no alterations to the documents are made and that the copyright statement is maintained in all copies.

'View only' files, such as lecture recordings, are explicitly excluded from download, and creating copies of these recordings by students and other users is strictly illegal.

The author of this document has made the best effort to observe current copyright law and the copyright policy of St. George's University. Users of this document identifying potential violations of these regulations are asked to bring their concerns to the attention of the author.

Recommended reading

Drake RL, Vogl AW, Mitchell AWM. Gray's anatomy for students. 5th ed. Elsevier. Chapter 8.

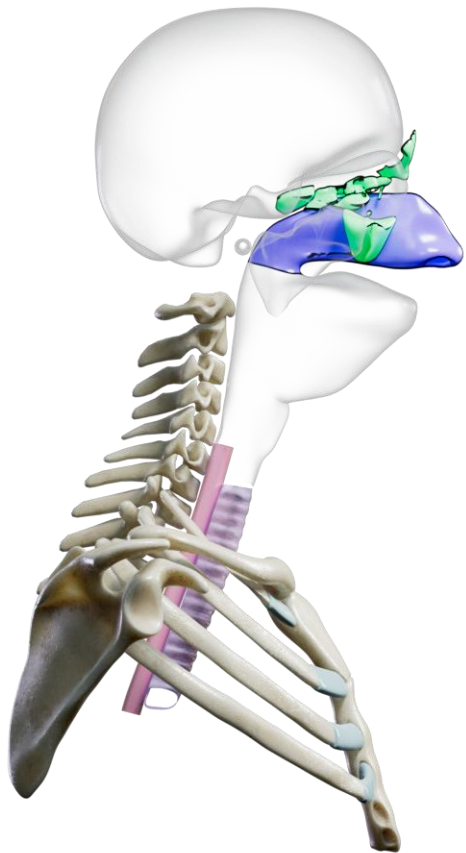

Pay special attention to the 'In the Clinic' boxes which contain the clinical correlates for this topic.

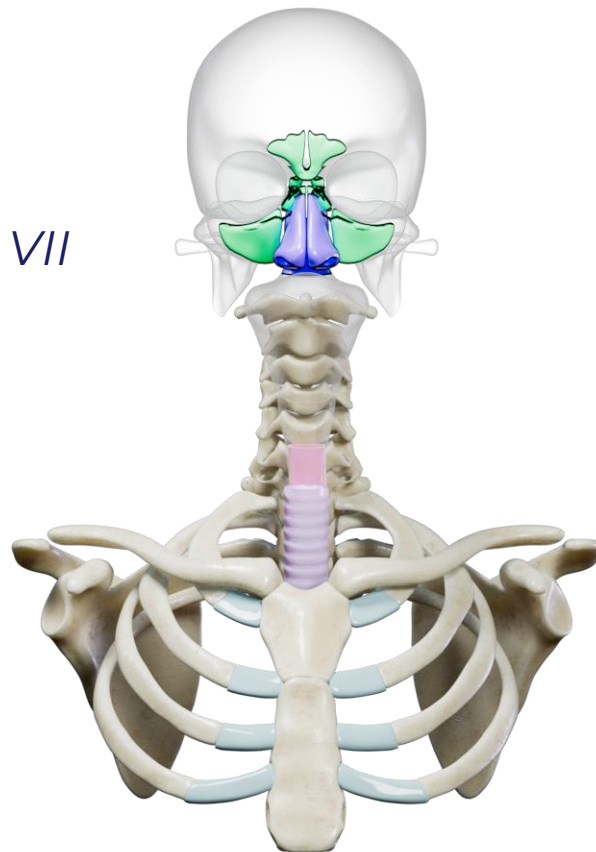

Objectives

SOM.MKII.BPM2.1.NB.1.ANAT.0096	List the bones that form the boundaries of the nasal cavity.
SOM.MKII.BPM2.1.NB.1.ANAT.0097	List the bones and cartilage that form the nasal septum.
SOM.MKII.BPM2.1.NB.1.ANAT.0098	Describe the sensory and parasympathetic innervation of the nasal cavity
SOM.MKII.BPM2.1.NB.1.ANAT.0099	Describe the structure and function of the turbinates
SOM.MKII.BPM2.1.NB.1.ANAT.0100	Describe the blood supply and lymphatic drainage of the nasal cavity
SOM.MKII.BPM2.1.NB.1.ANAT.0101	Describe the paranasal sinuses, the bones in which they are found and where each opens into the nasal cavity
SOM.MKII.BPM2.1.NB.1.ANAT.0102	Describe the sensory and parasympathetic innervations of the paranasal sinuses. (GAFS)
SOM.MKII.BPM2.1.NB.1.ANAT.0107	Explain the clinical significance of Kiesselbach's area in relation to epistaxis
SOM.MKII.BPM2.1.NB.1.ANAT.0229	Identify major anatomical structures of the oral and nasal regions in MRI, CT and X-ray imaging

Overview

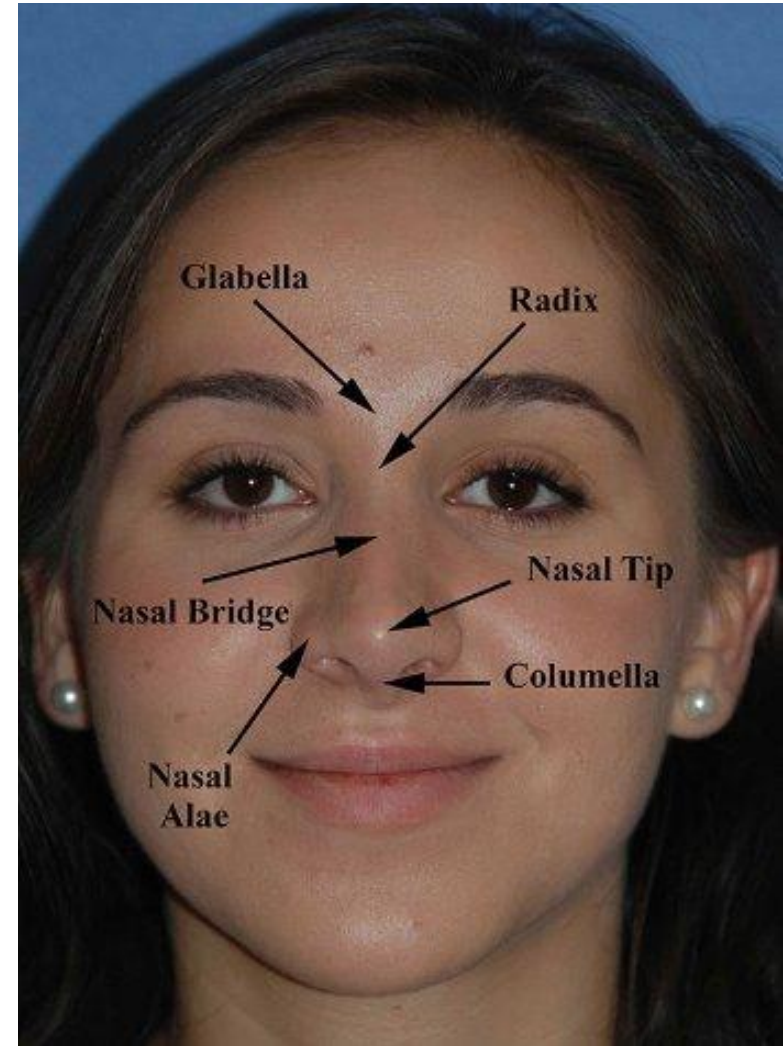

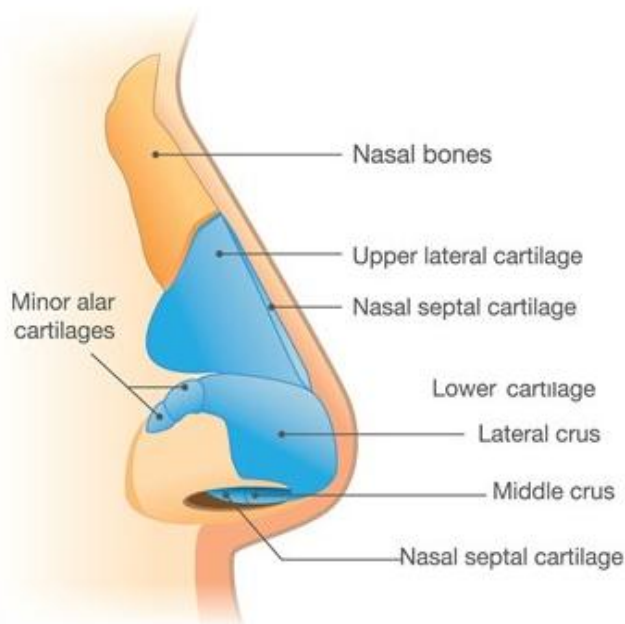

- External nose
- Nasal cavity
- Paranasal sinuses
- *Cranial Nerves: I, V, VII*

External Nose – Superficial Landmarks

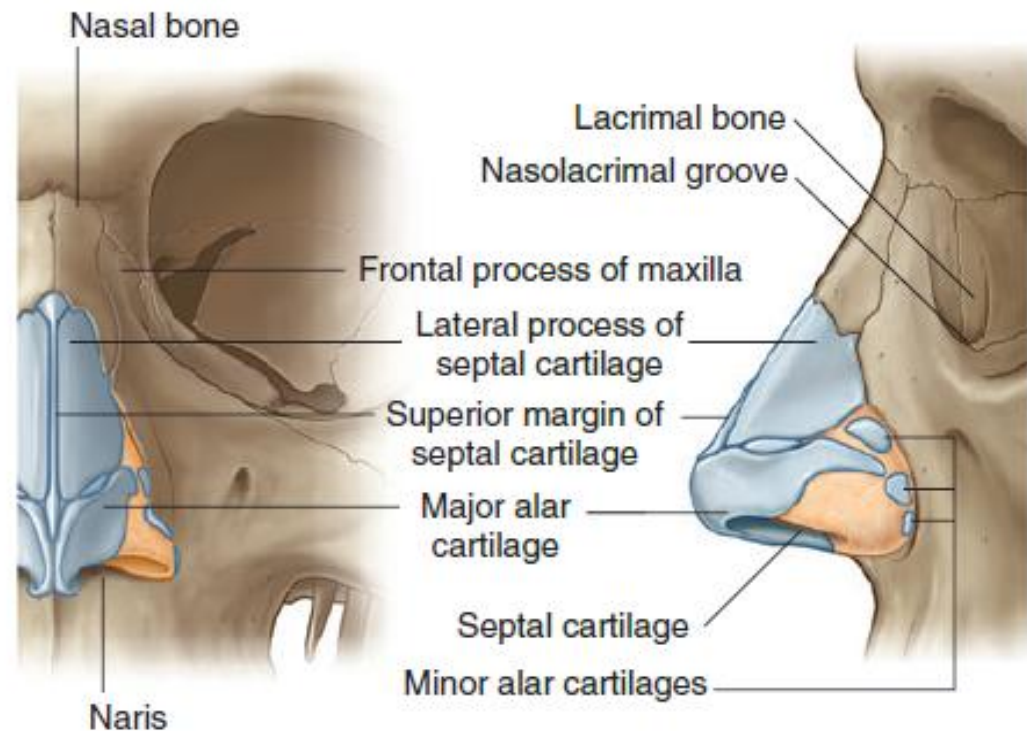

- Visible projection from the face
- Made up of different **cartilages**
 - lateral
 - alar
 - septal

External Nose - Skeleton

Consists of

- Nasal bones
- Frontal processes of maxillae
- Nasal part of frontal bone and its nasal spine
- Bony parts of nasal septum

Nasal Septum

- Divides nasal chamber into two nasal cavities

Main components:

- Cartilaginous part*
- Bony part*
 - Vomer
 - Perpendicular plate of ethmoid

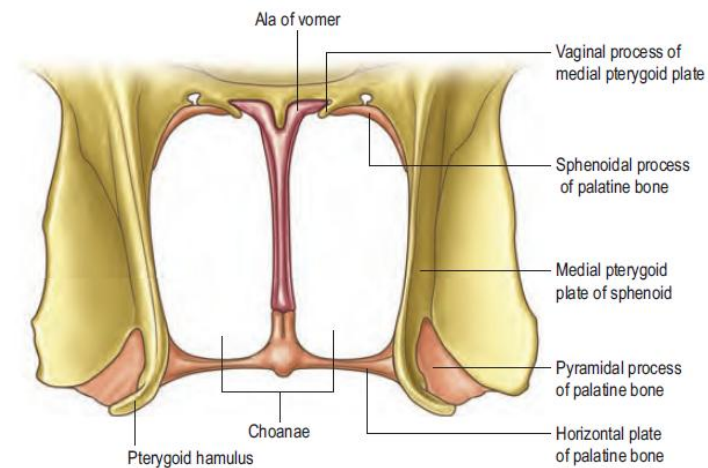

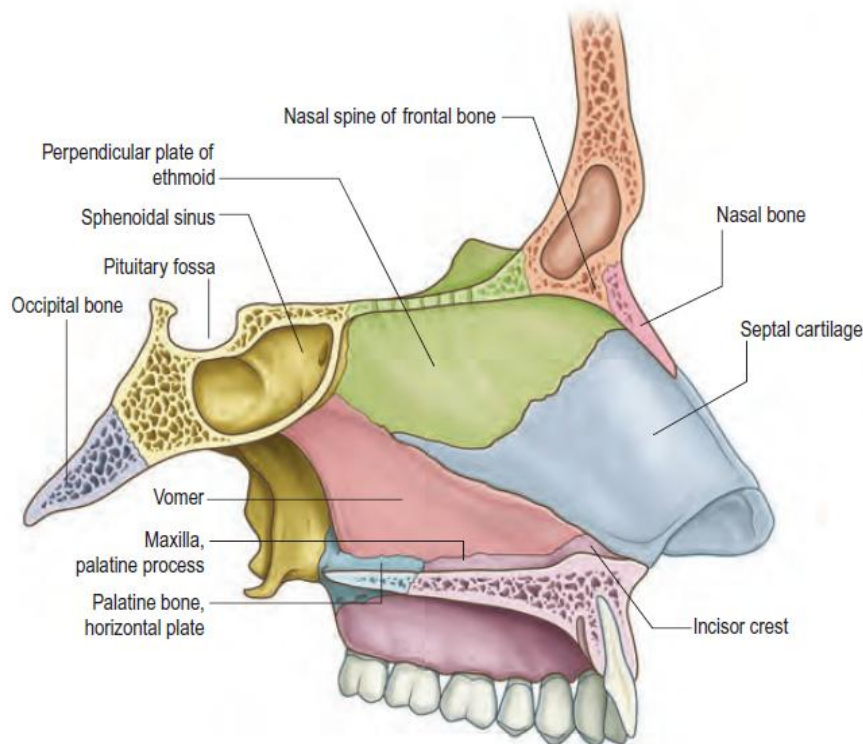

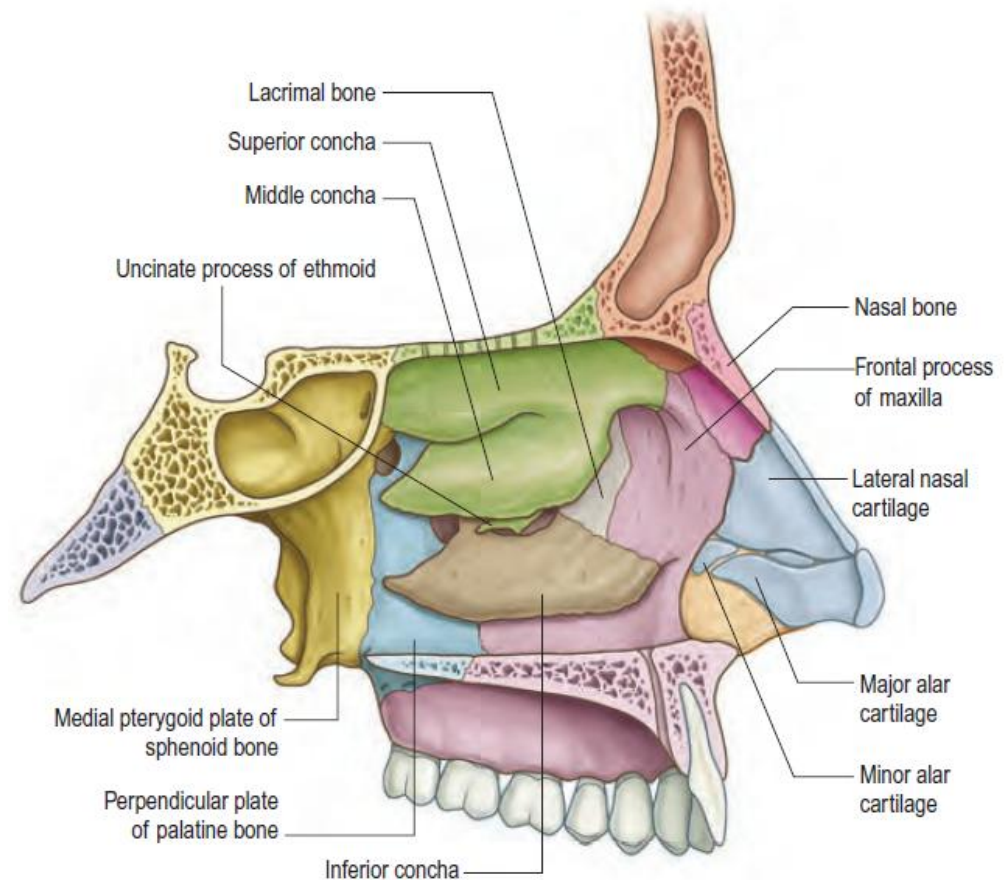

Fig. 39.5 A posterior view of the choanae.

Nasal Cavity Boundaries

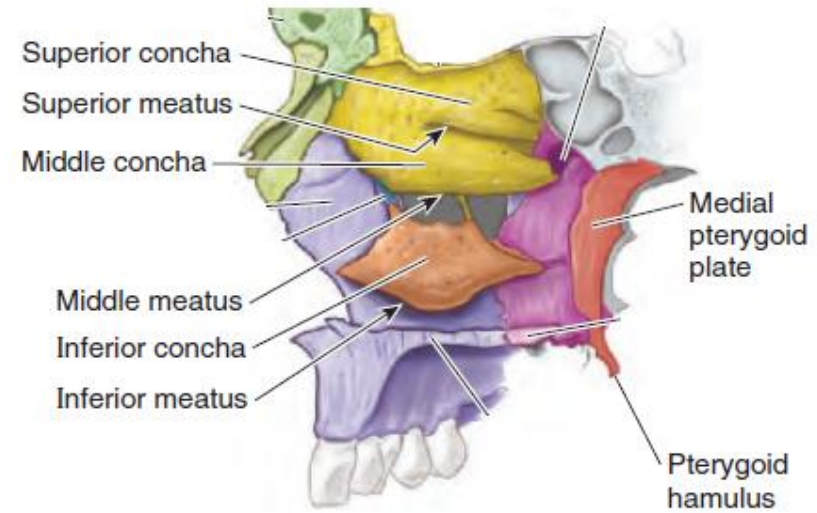

4 bony walls:

- Medial wall
 - **nasal septum**
- Roof: curved and narrow
 - nasal, frontal, ethmoid, sphenoid
- Floor: wider than roof
 - maxilla, palatine
- Lateral wall: irregular shape
 - nasal, ethmoid
 - maxilla, palatine
 - lacrimal, medial pterygoid plate of sphenoid bone
 - conchae

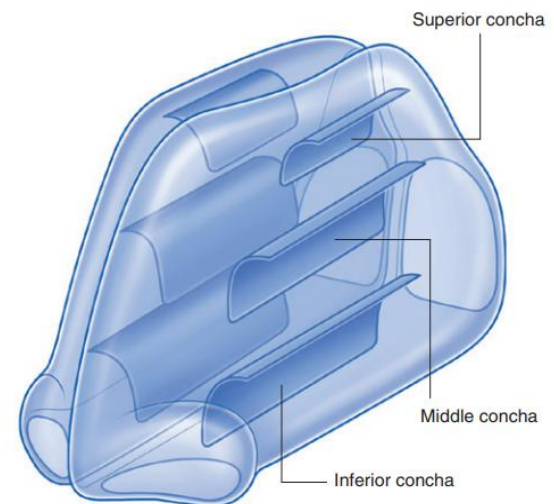

Conchae

- Nasal cavity lateral wall is raised into folds by **three conchae**
 - convoluted bony structure offering greater surface area for heat exchange
 - covered by mucus membrane containing large vascular spaces (ie. turbinate)
- Superior and Middle conchae**
 - ethmoid bone processes
- Inferior concha**
 - longest and broadest
 - independent bone
- A meatus underlies each bony formation

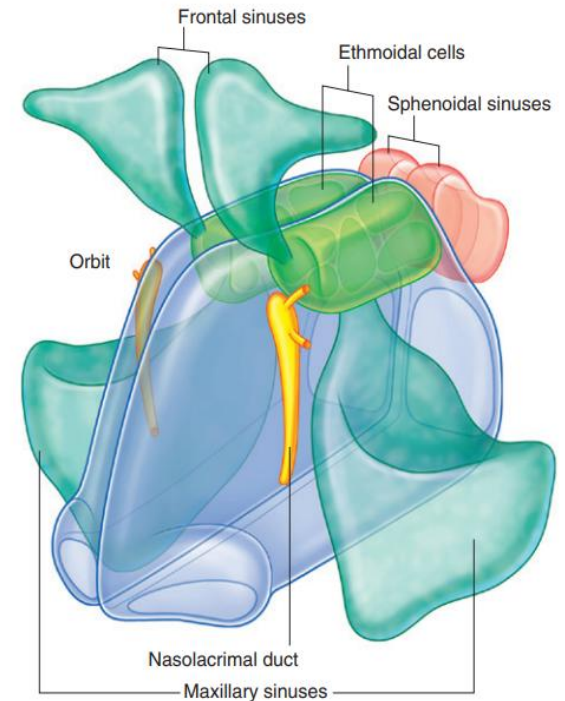

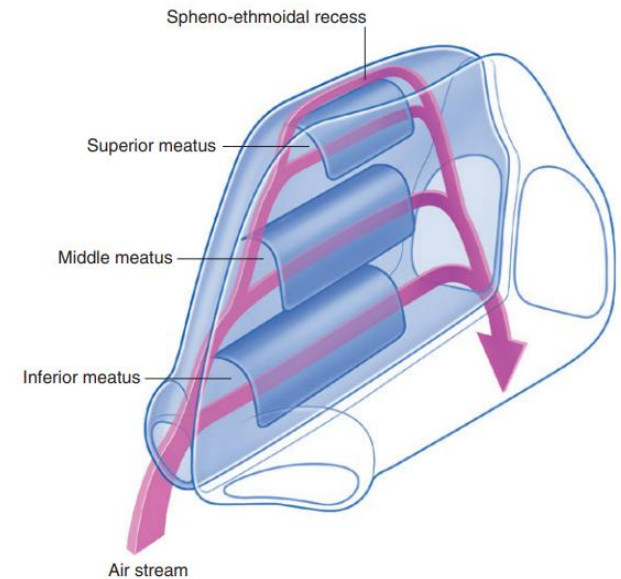

(A) Lateral wall of nasal cavity

Meatuses

A meatus underlies each bony formation

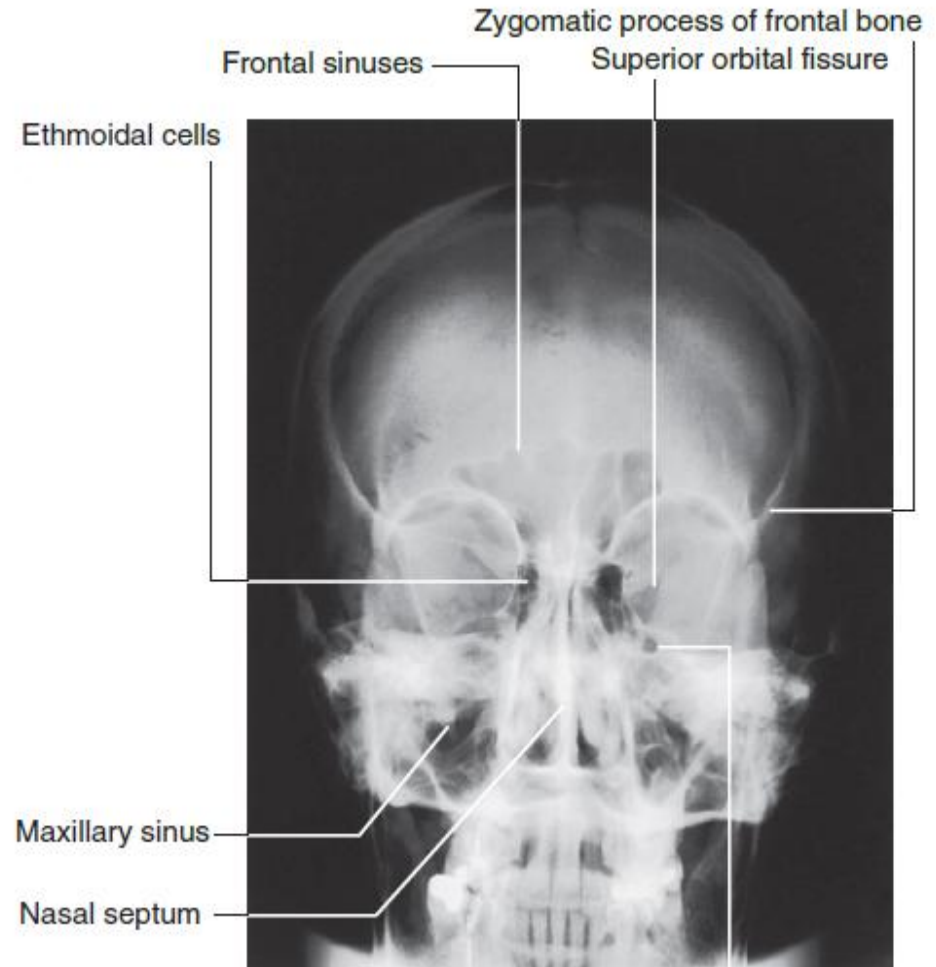

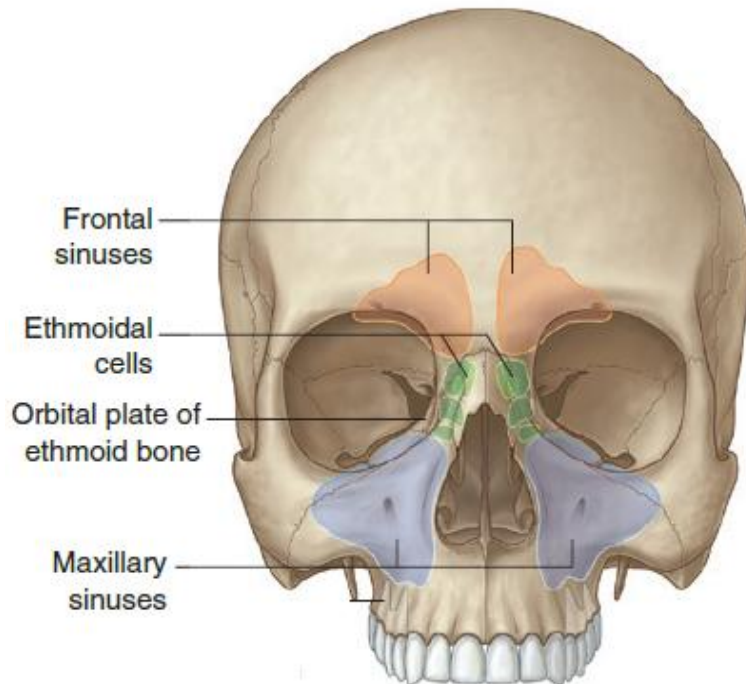

- *Superior nasal meatus*
- *Middle nasal meatus*
- *Inferior nasal meatus*
- *Common nasal meatus*
- *Sphenoethmoidal recess*

Paranasal Sinuses

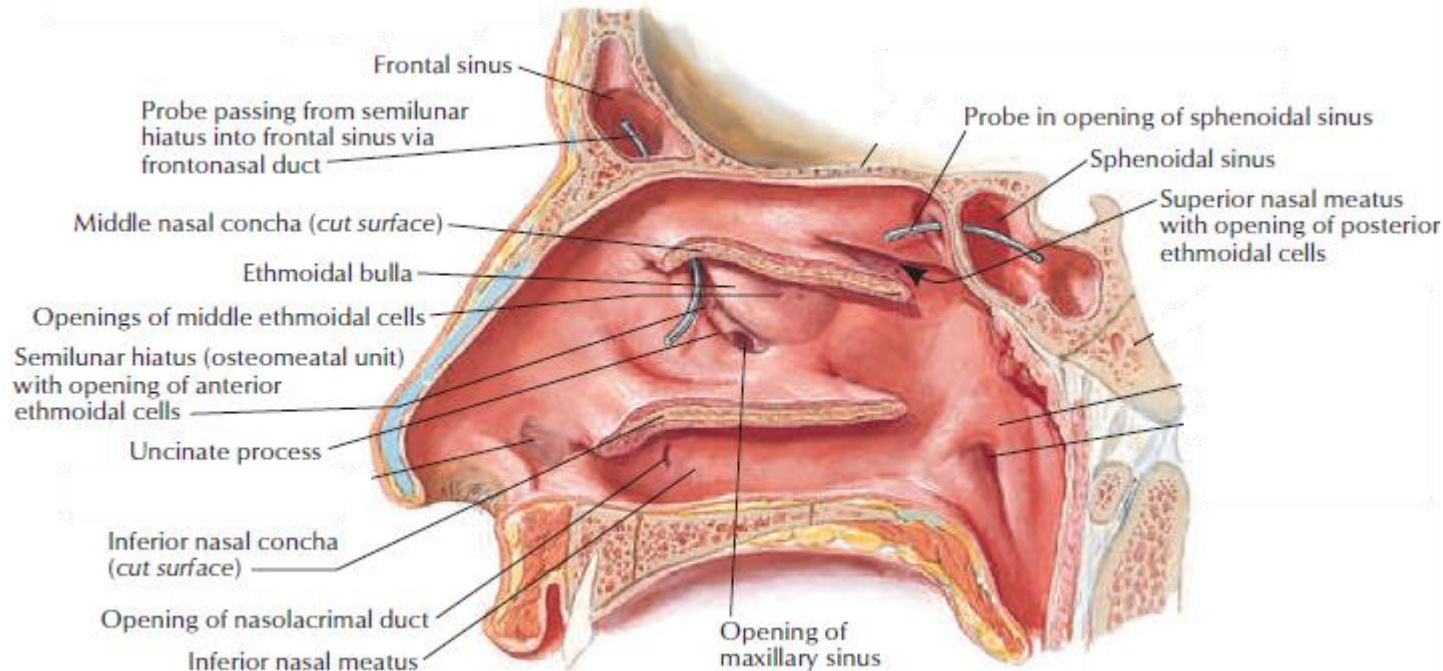

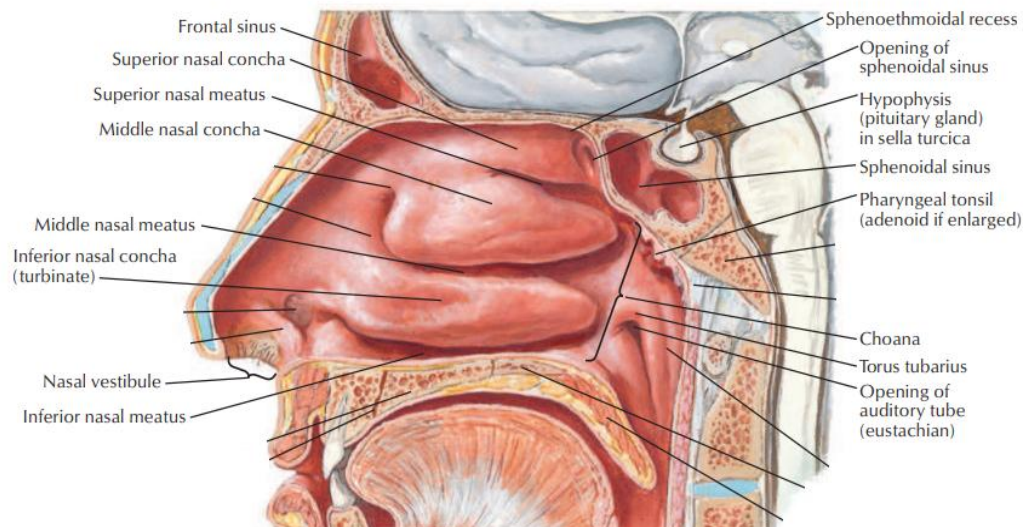

Air-filled extensions of nasal cavity into the following cranial bones:

- Frontal
- Ethmoid
- Sphenoid
- Maxilla

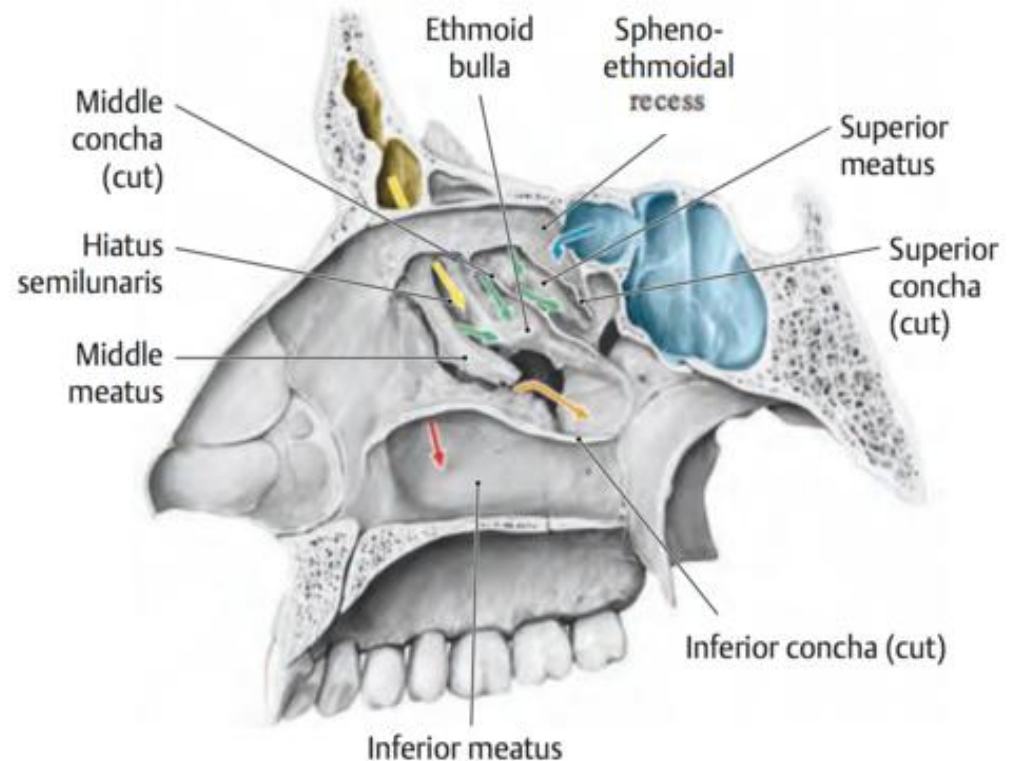

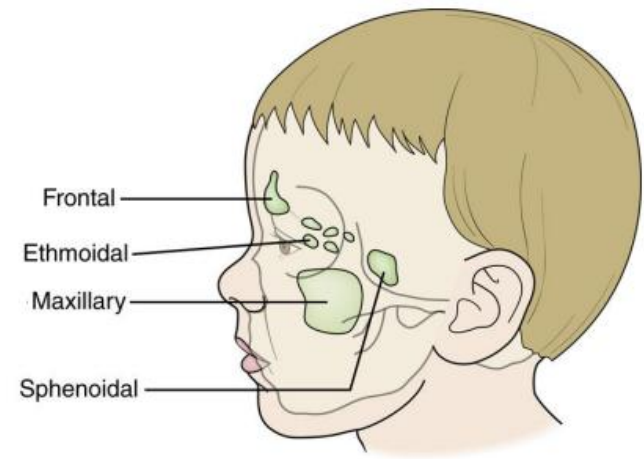

Nasal Cavity Connections

- Frontoasal ostia
- Ethmoid ostia
- Sphenopalatine foramen
- Maxillary sinus ostia
- Nasolacrimal ostia

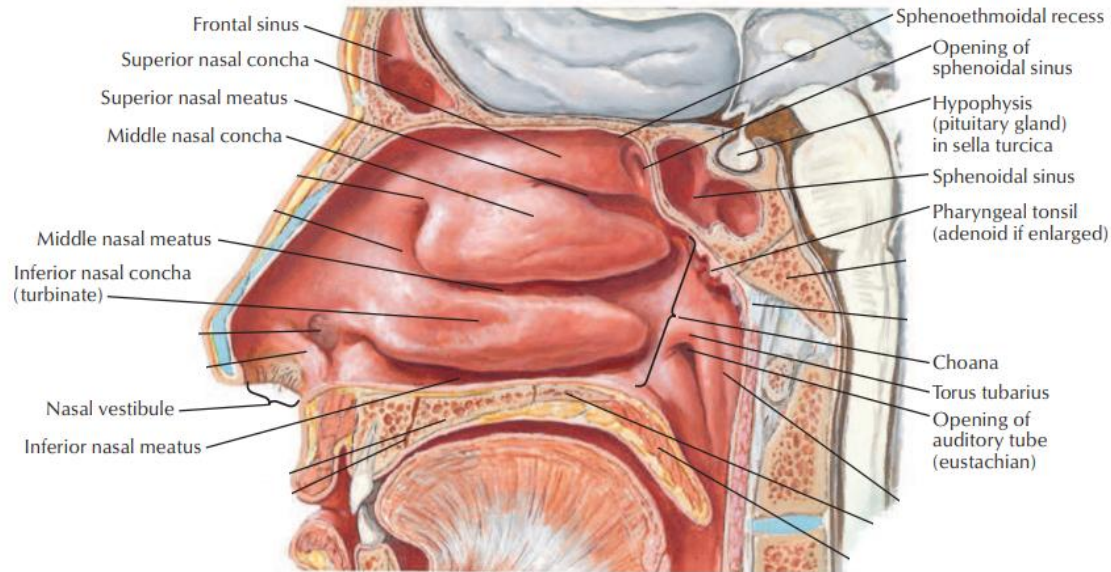

Nasal Cavity Passage Flow

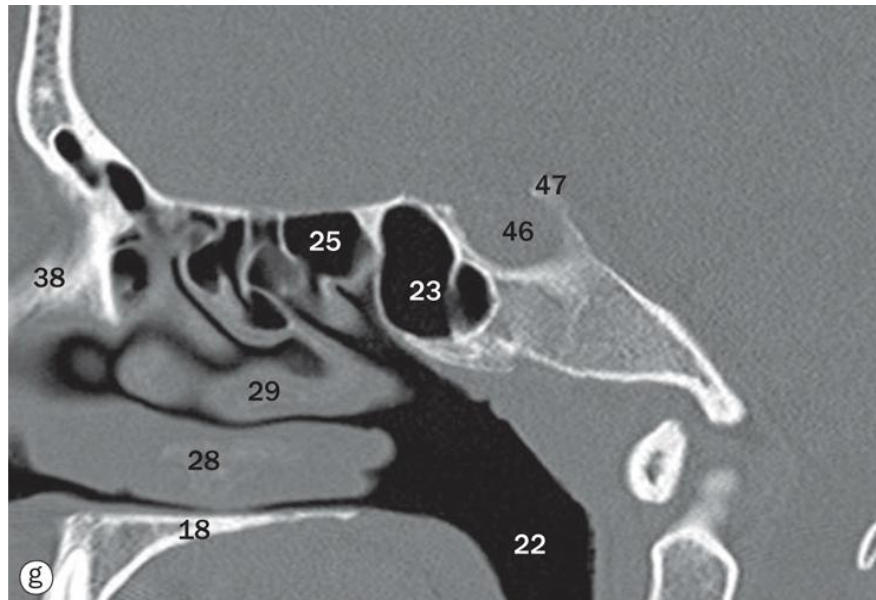

- *Sphenoethmoidal recess*
 - receives **sphenoidal sinus**
- *Superior nasal meatus*
 - receives **posterior ethmoid cells**
- *Middle nasal meatus*
 - receives **frontal** and **maxillary** sinus, plus **anterior and middle ethmoid cells**
- *Inferior nasal meatus*
 - receives **nasolacrimal duct**
- *Common nasal meatus*

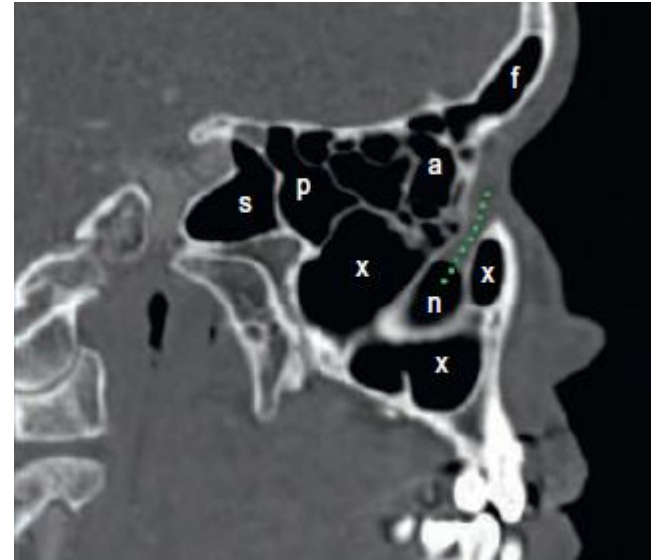

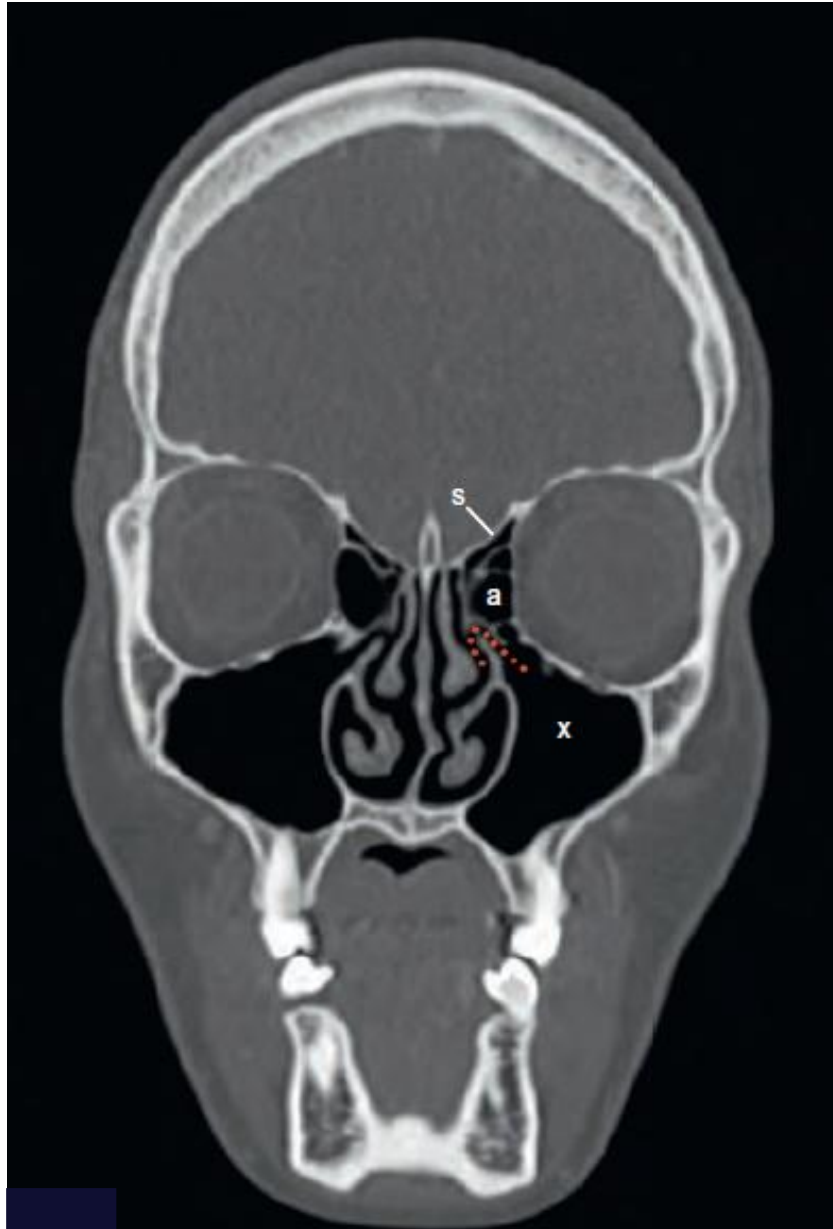

Nasal Cavity - Imaging

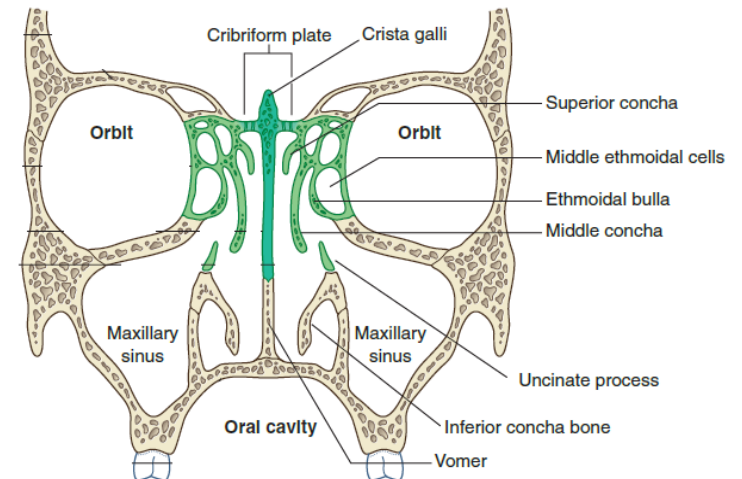

- 18: hard palate
- 22: nasopharynx
- 23: sphenoid sinus
- 25: posterior ethmoid air cells
- 28: inferior turbinate
- 29: middle turbinate
- 38: nasal bone
- 46: hypophyseal fossa

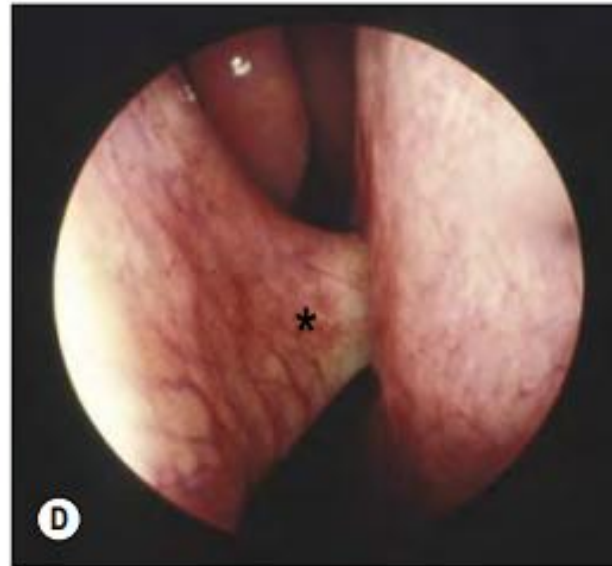

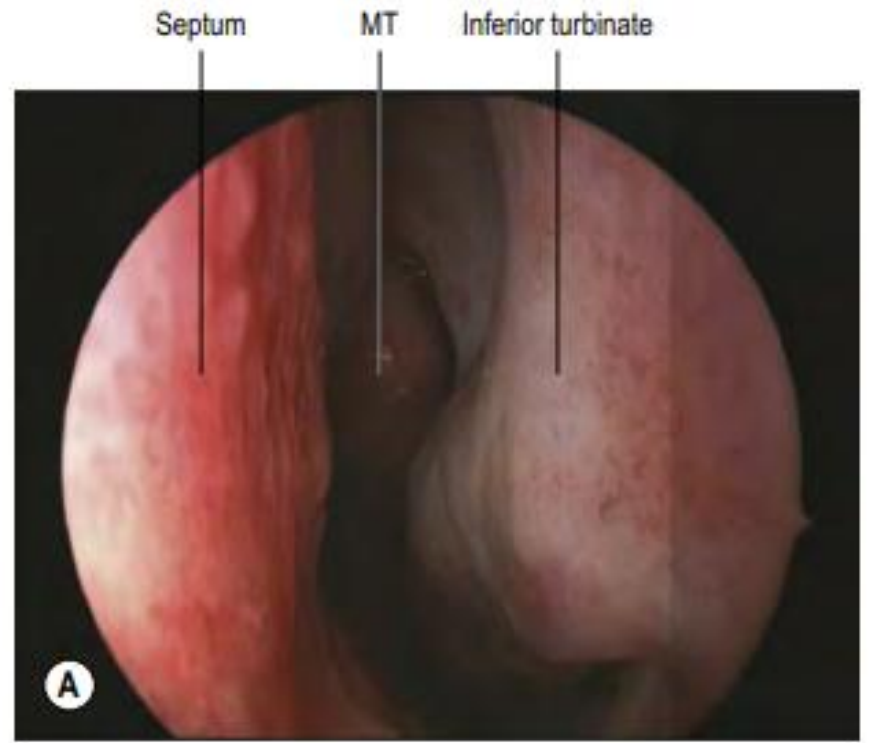

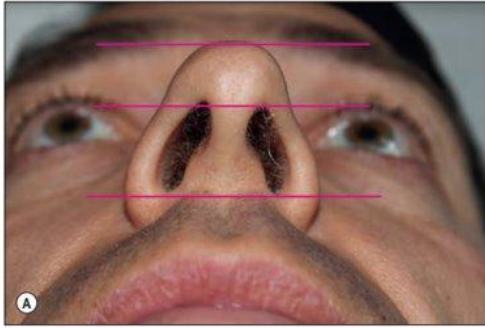

Air Pathways - Imaging

f: frontal air sinus
 a: ant ethmoid air cells
 p: posterior ethmoidal air cells
 s: sphenoidal air sinus
 x: maxillary air sinus
 n: nasal cavity

Clinical Inspection

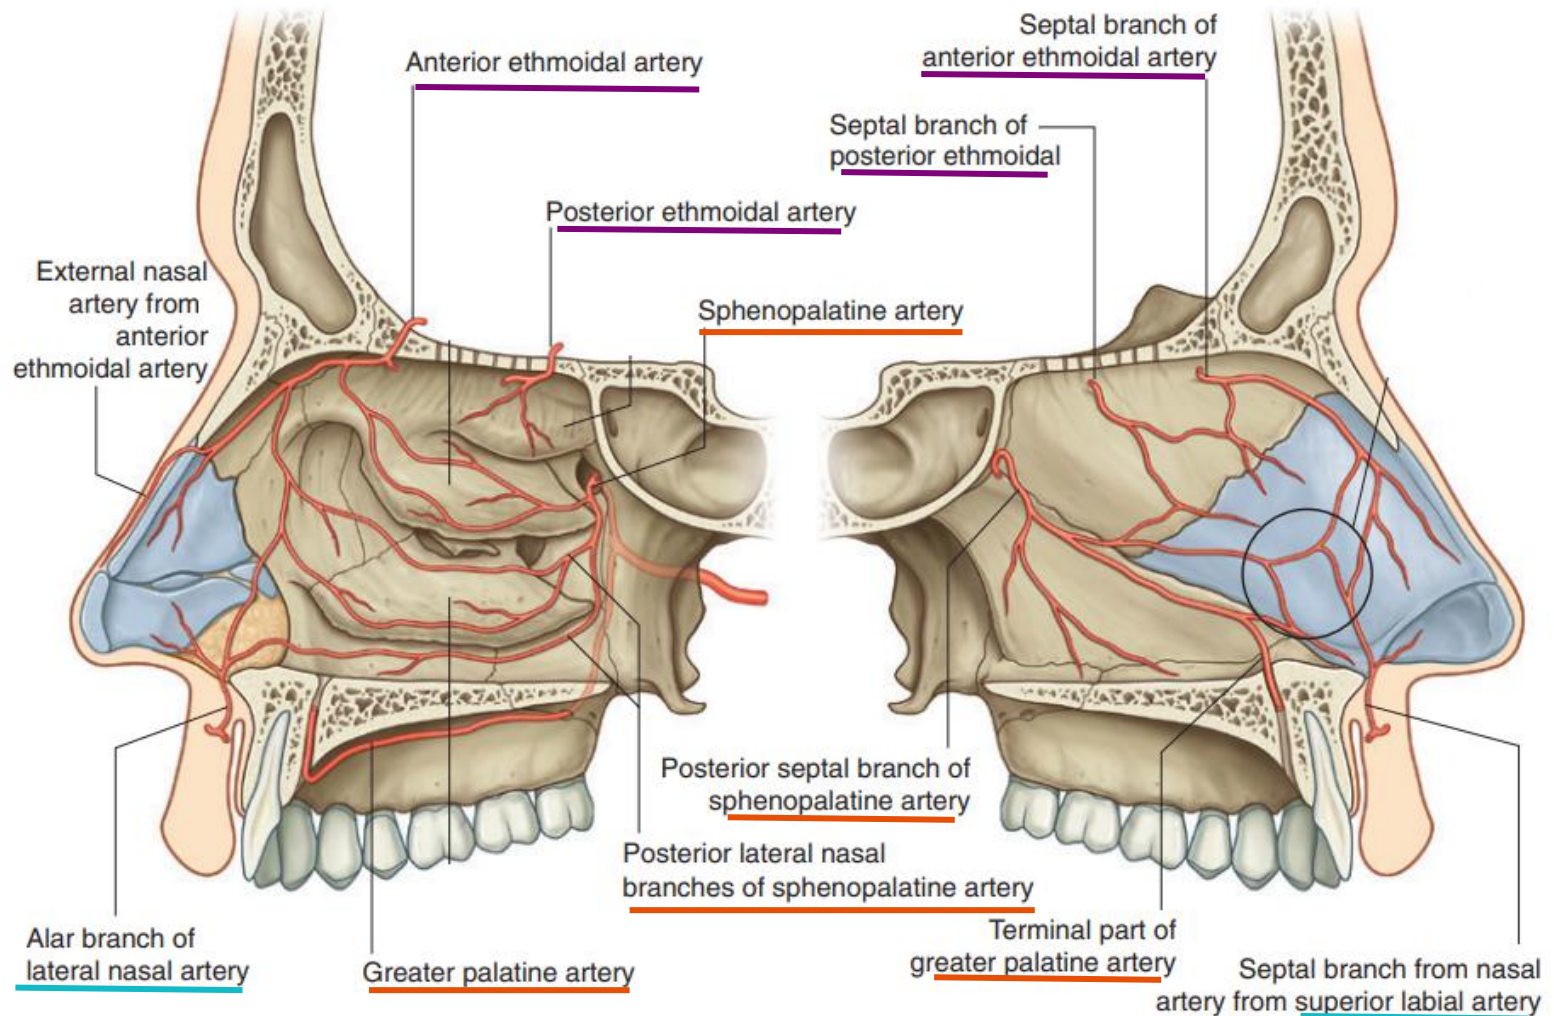

Nasal Vasculature

From:

Ophthalmic artery

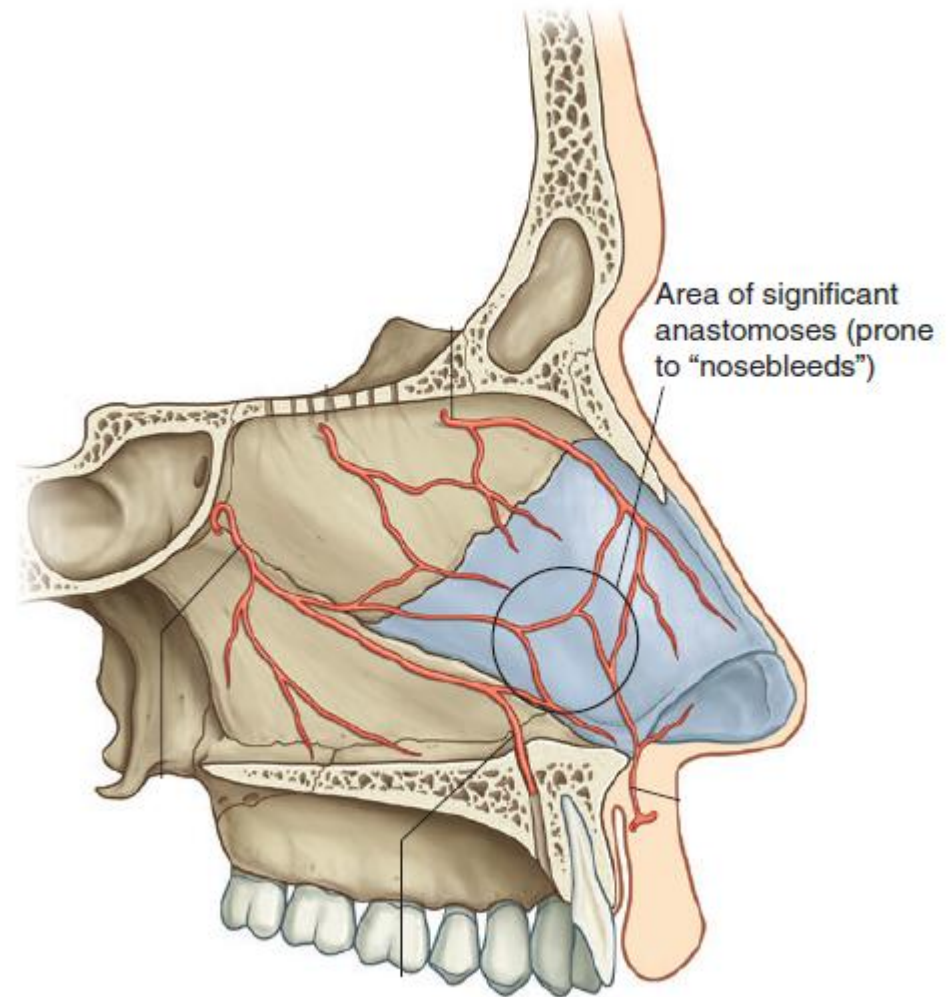

Maxillary artery

Facial artery

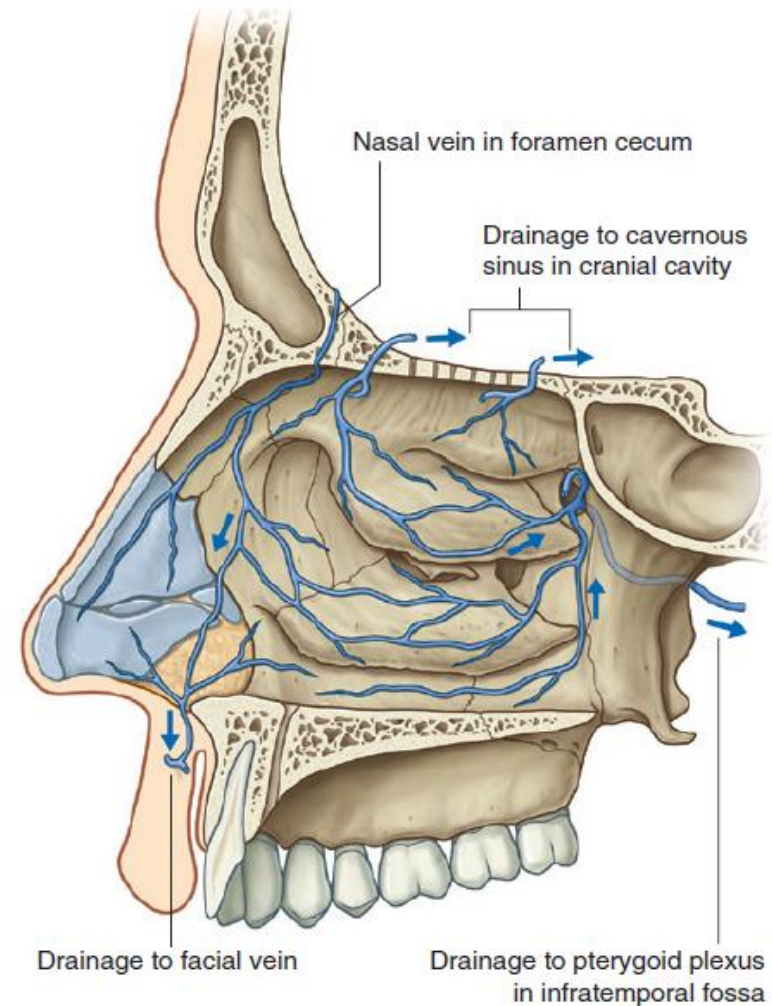

Kiesselbach's Plexus

- The anterior part of the nasal septum contains a **highly vascularized** region of significant anastomoses
 - i.e. Little's area
- Most common site of significant **epistaxis** (nosebleed)

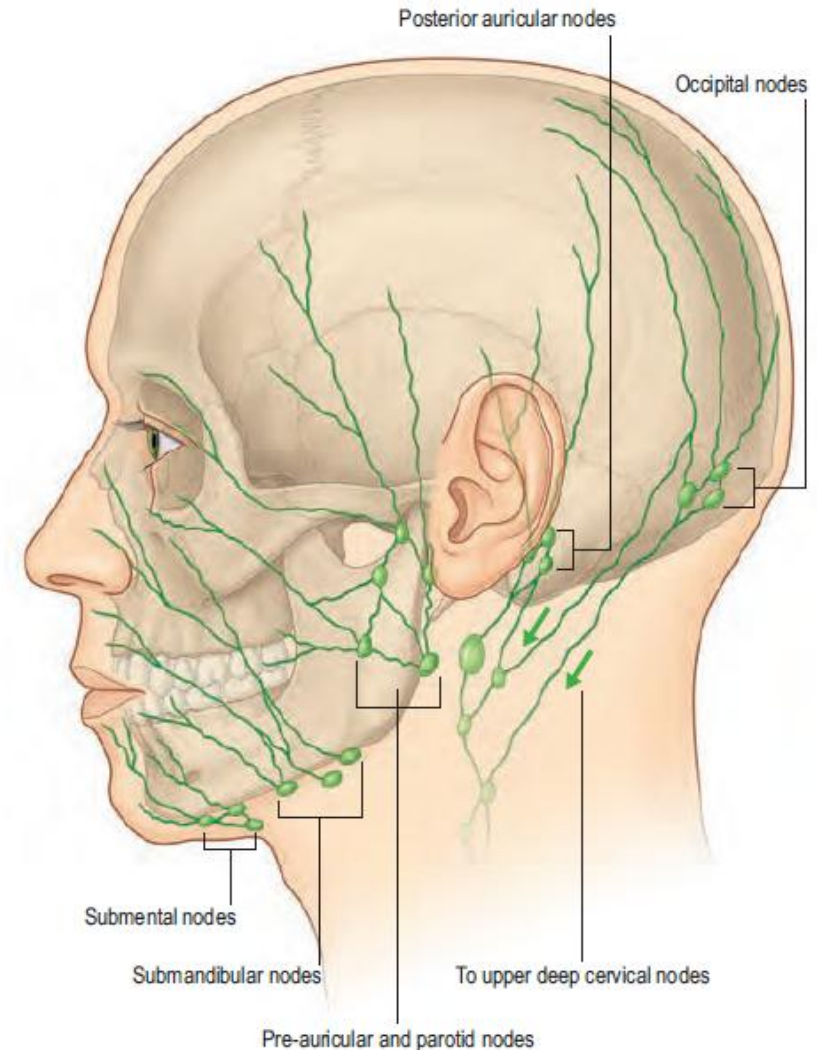

Venous Drainage

- Anterior nose
 - veins accompanying anterior ethmoidal veins, then pass to ophthalmic or *facial veins*
- Posterior nose
 - sphenopalatine vein, which drains into the *pterygoid venous plexus*
- Emissary veins
 - can connect to orbital surface of frontal lobe of brain

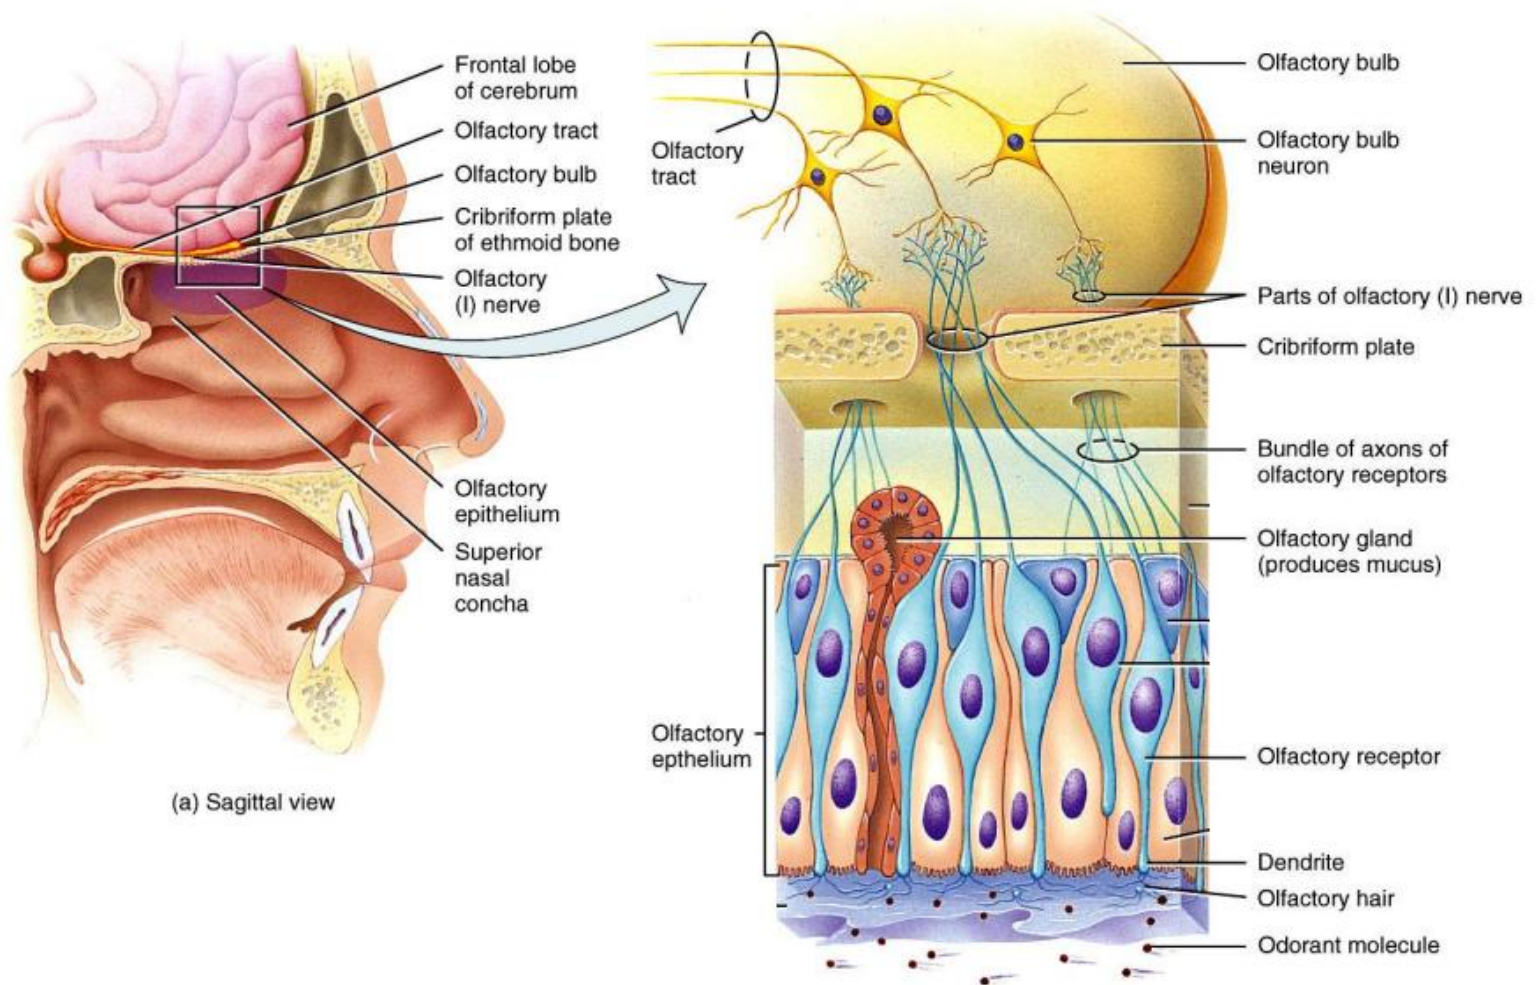

Lymphatic Drainage

- External nasal skin
 - submandibular nodes
 - Root of nose: **pre-auricular** and **parotid nodes**
- Anterior nasal cavity
 - end in submandibular nodes
- All drain into deep cervical nodes along the internal jugular vein
 - jugulo-digastric node
 - jugulo-omohyoid node

Olfactory Nerve

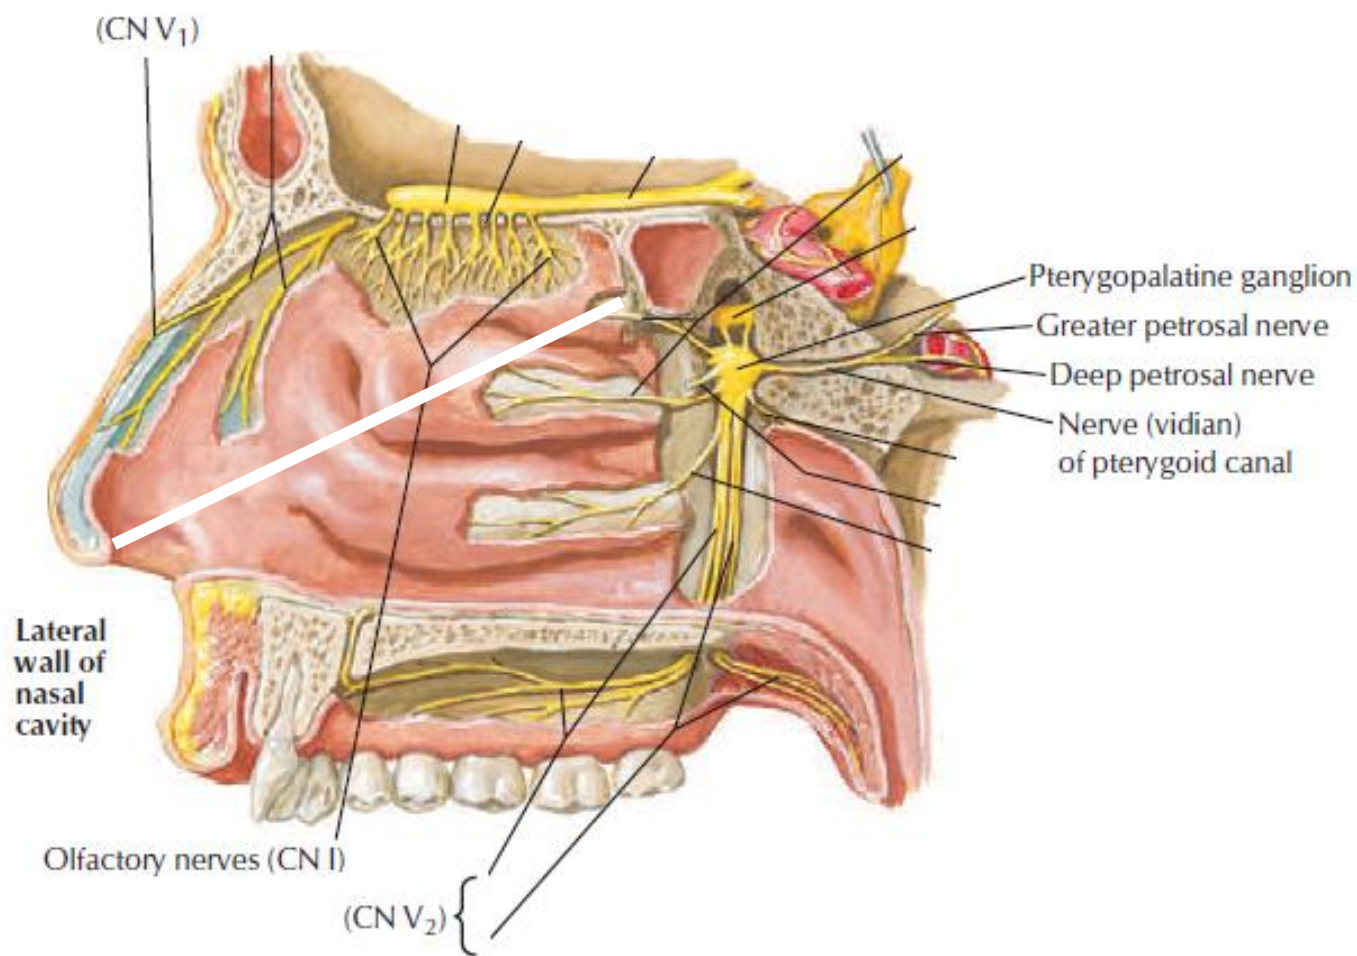

Special sensory bundles of olfactory nerve fibers (CN I) in the olfactory mucosa

Nasal Innervation

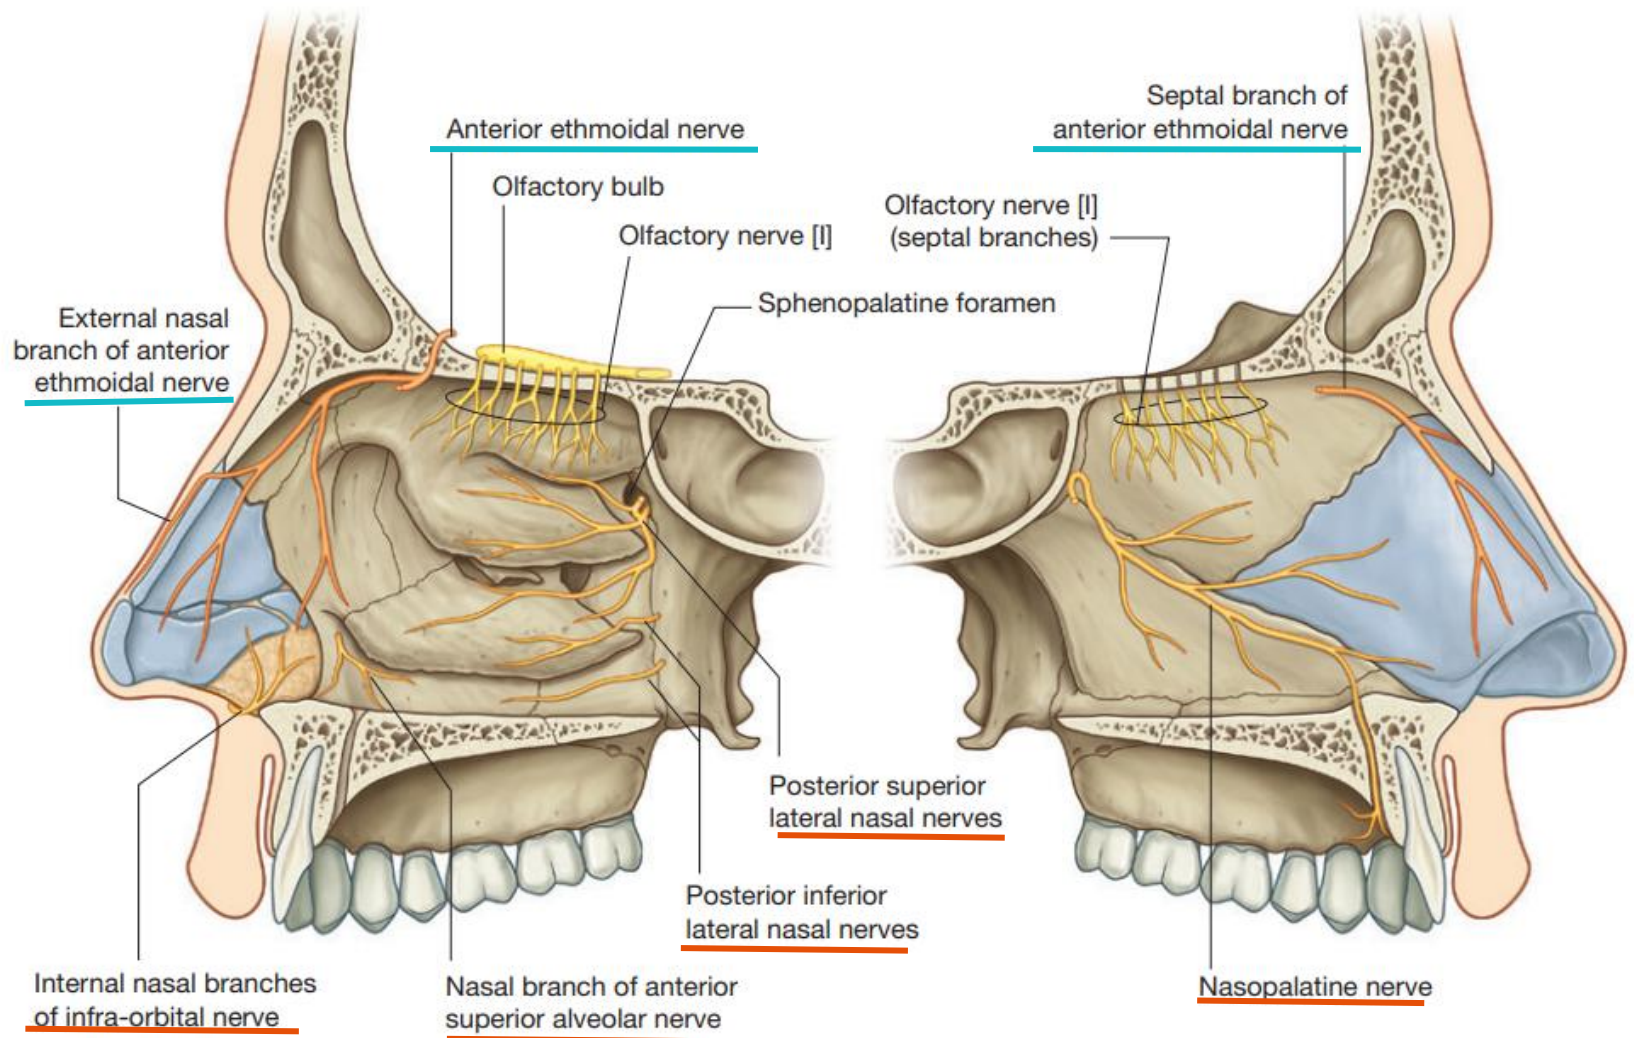

General guide:

- Anterosuperior: mostly **V1**
- Posteroinferior: mostly **V2**

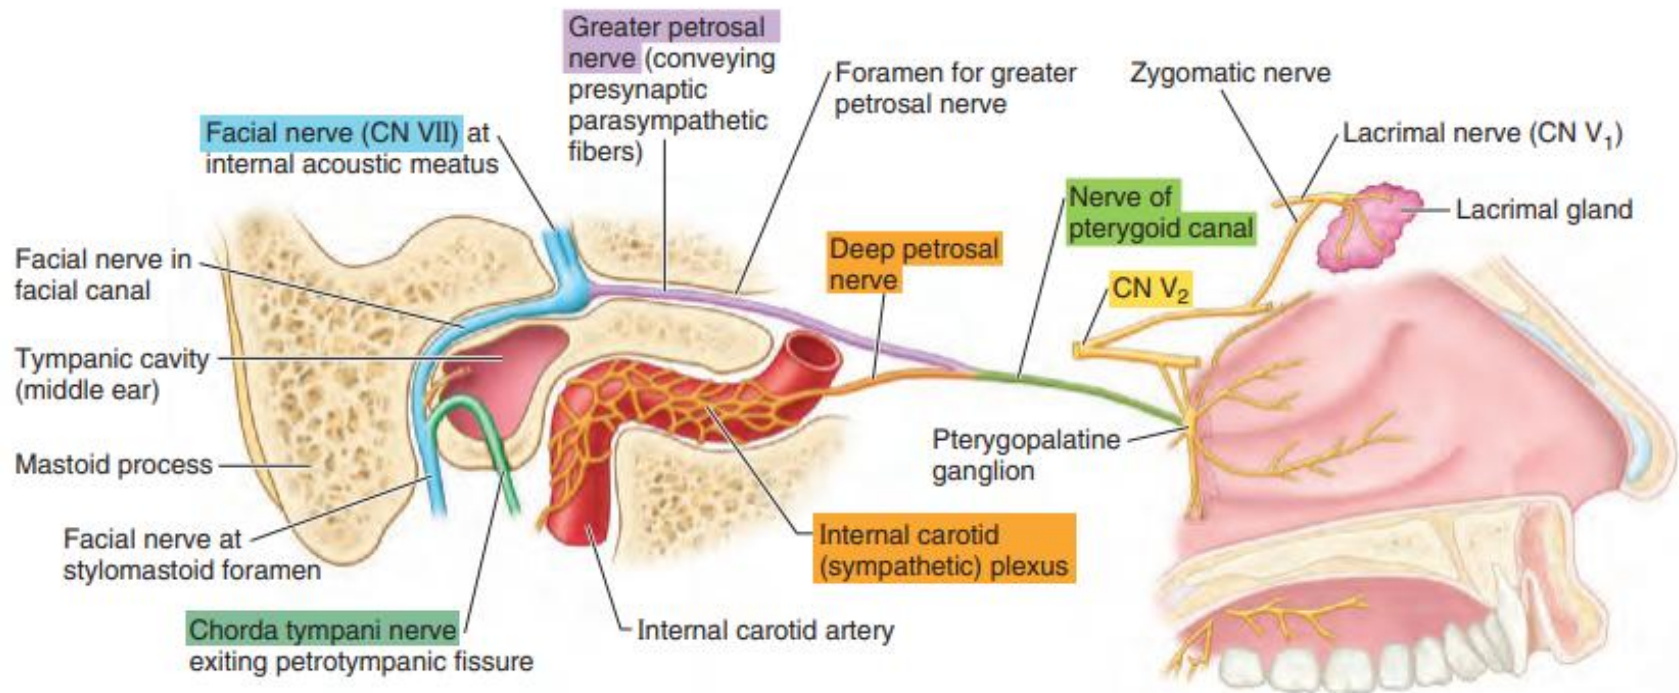

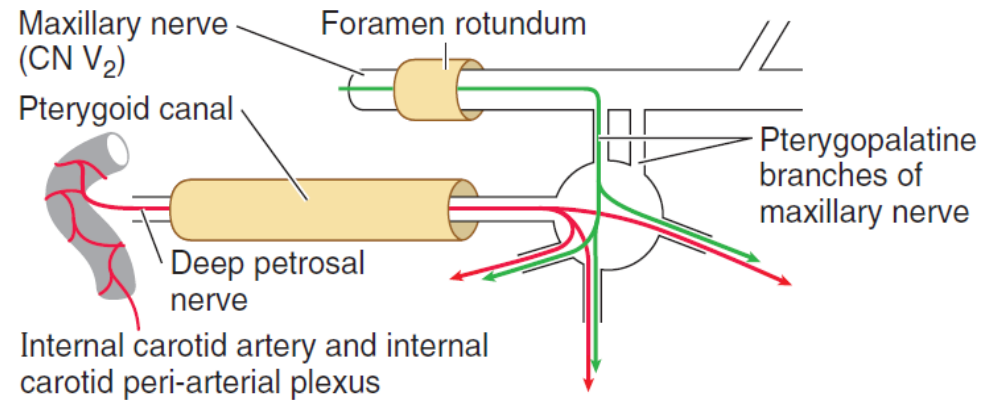

Nasal Innervation

- Anterosuperior: mostly V1
- Posteroinferior: mostly V2

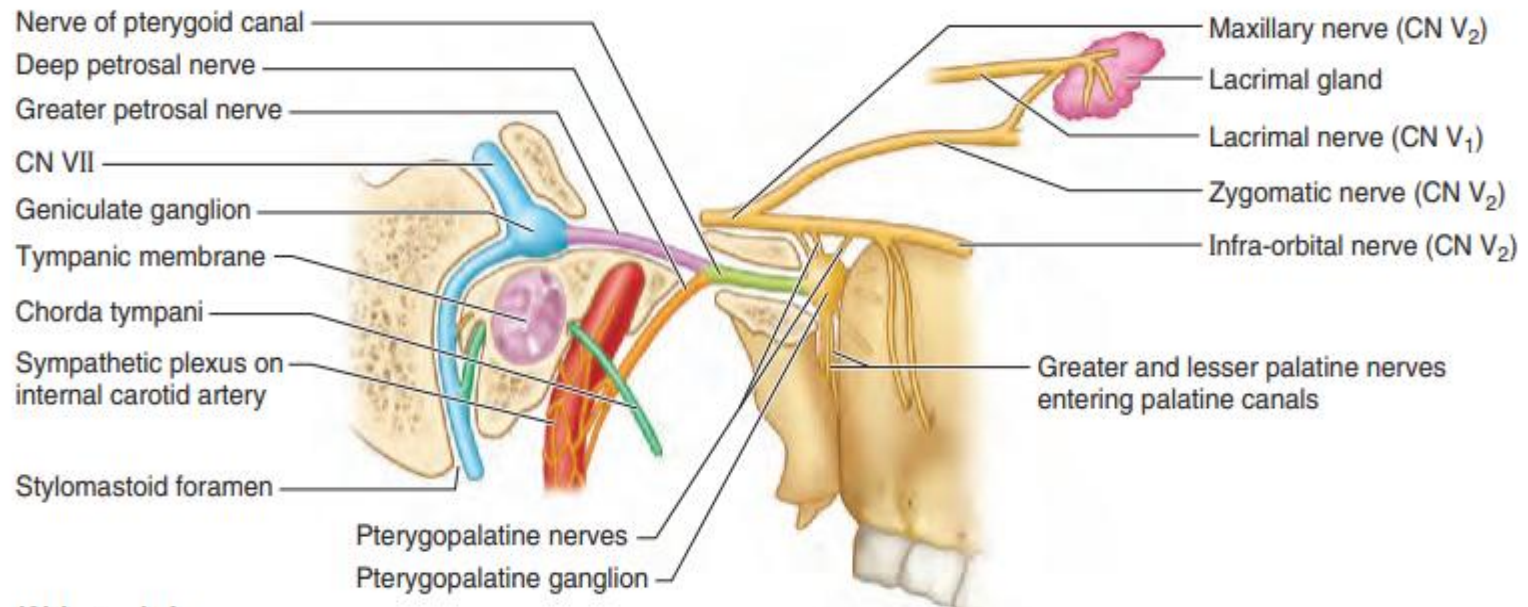

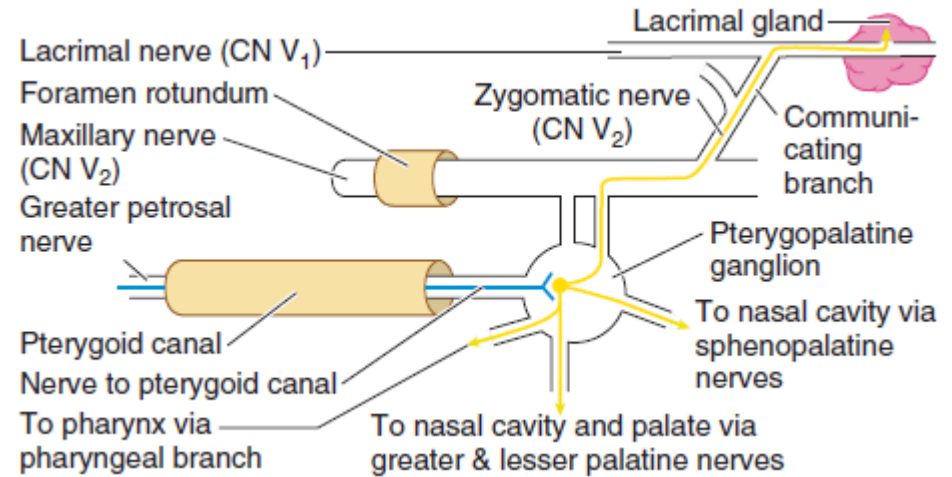

Autonomic Innervation

- Deep petrosal and greater petrosal fibers converge to form Vidian nerve
- Sympathetics pass without synapsing to nasal blood vessels

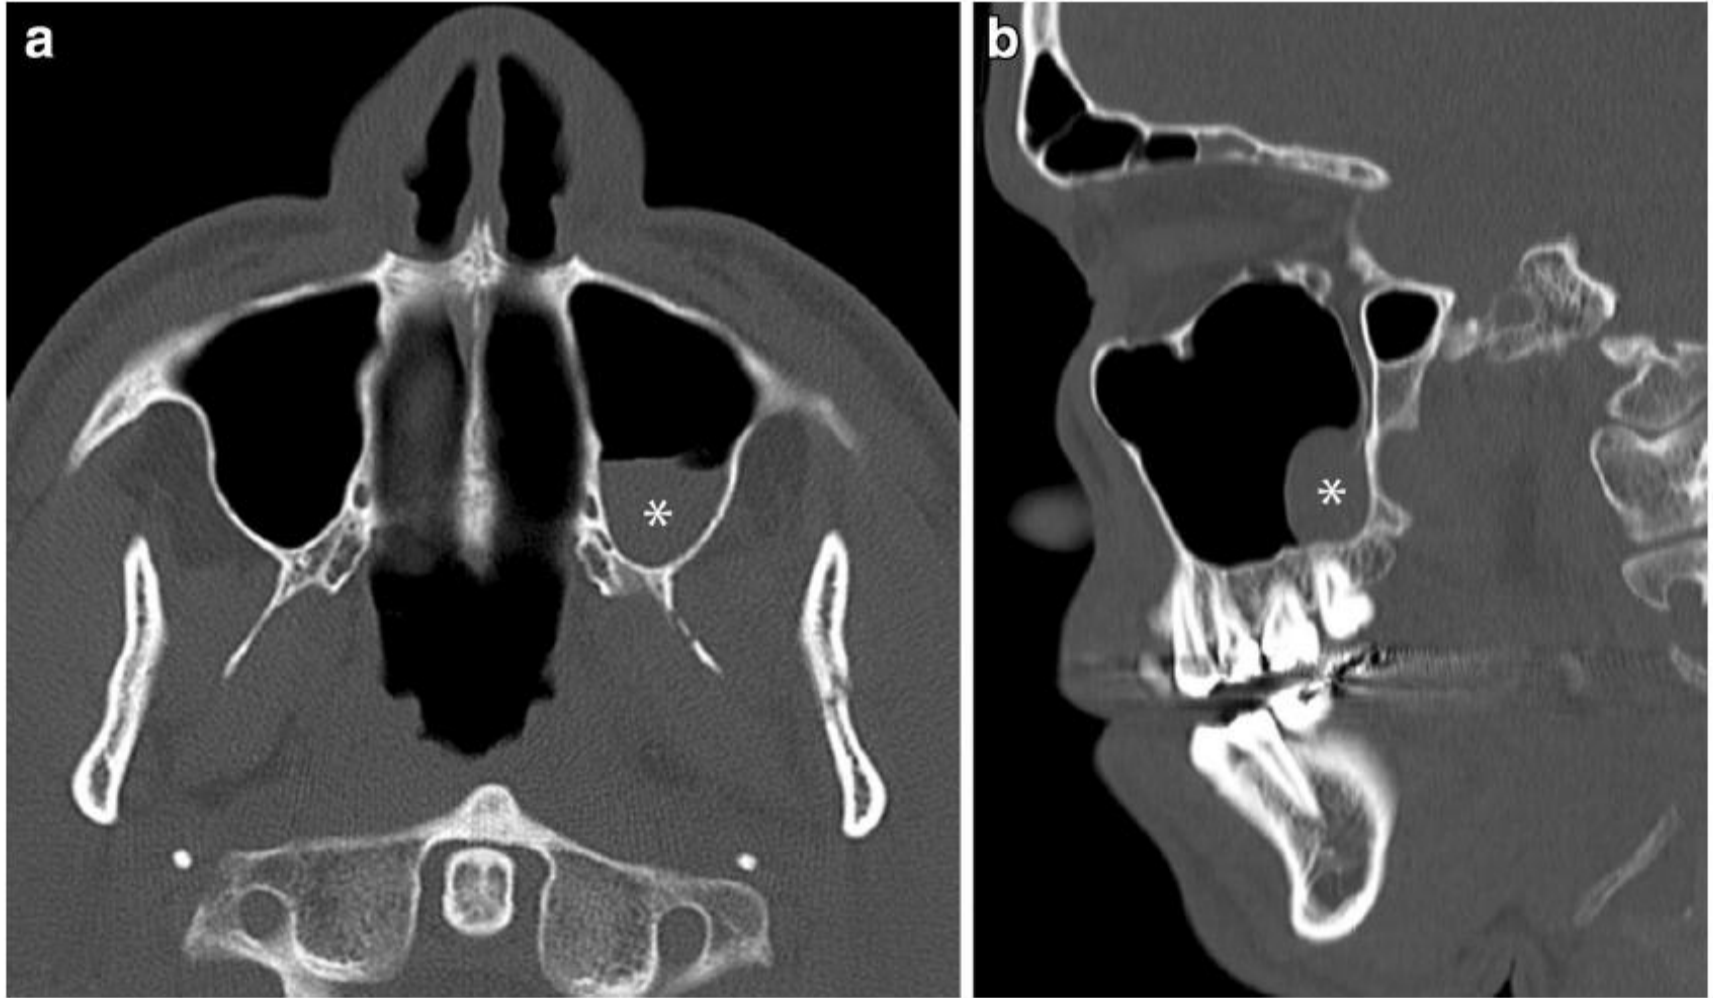

Autonomic Innervation

- **Deep petrosal** and **greater petrosal** fibers converge to form Vidian nerve
- Parasympathetics **synapse** to provide a secretomotor supply to the nasal mucus glands via branches of the maxillary nerves
