

BPM 501 Simulation Session

Objectives

1. Create a checklist of questions to evaluate a patient who presents with a 3-week history of progressive fatigue, increased thirst, and increased urination.
2. Identify the location for auscultating breath sounds and heart sounds
3. Describe the procedure for an abdominal examination
4. Calculate the anion gap and interpret the results using the Davenport diagram
5. Describe the findings shown on the patient's abdominal X-ray and CT scan
6. Determine the diagnosis based on the findings of the history, physical examination and imaging
7. Create a treatment plan for the patient

Case Note

A 45-year-old woman/ man (Natalie / Nathan Grant) comes to the physician because of a 3-week history of progressive fatigue, increased thirst, and increased urination. She / he has a past medical history of morbid obesity, hypertension, and osteoarthritis.

Instruction for students

This is a team building activity to integrate Basic Science knowledge from the CPR module in BPM 500 with the DM module in BPM 501. Students are required to ask the patient relevant questions about her condition, discuss the technique and perform the necessary physical examinations, interpret the laboratory and imaging studies, and propose a treatment plan for the patient. Whenever possible, apply your knowledge of Physiology, Anatomy and Biochemistry to the case.

Pre-Session Review Questions

1. What are the types of diabetes?
2. What are the features of diabetes?
3. Why is there hyperglycemia in diabetes?
4. What are possible complications of diabetes?
5. How is diabetes managed?
