2 rules: You must watch pathoma and you must watch sketchy. Anything else is negotiable.
Sketchy: The key to sketchy is to get 3 passes on each video before the exam, So start them the week before you learn them in class. They WILL cover more than you need to know for the first exam, since you'll learn more about each micro in each body system. Do yourself a favor and learn it all now, and you'll know it for later
Pathoma: on the other hand is an amazing post/pre-read that only need to be annotated/watched once (key for path lab)
